

The Clearing House Customer Documentation

RTP Message Specification

Version 3.0
January 2023

AUTHORIZATION

THIS DOCUMENT (“DOCUMENT”) IS PROVIDED UNDER THE TERMS OF THIS RTP DOCUMENTATION AGREEMENT (“AGREEMENT”). ANY USE OR REPRODUCTION OF THE DOCUMENT CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

This Agreement is an agreement between Recipient and The Clearing House Payments Company, L.L.C. (“Payco”). Capitalized terms used but not defined in this Agreement shall have the meanings given to such terms in the Real-Time Payments Operating Rules or Real-Time Payments Participation Rules released by Payco from time to time (collectively, the “Rules”) which are available for download at Payco’s website, <https://www.theclearinghouse.org/payment-systems/real-time-payments> . For purposes of this Agreement, “Recipient” means the person who receives this Document from Payco or, if the person who receives this Document from Payco is the representative of a juristic person, that juristic person.

Subject to the terms of this Agreement, Payco hereby grants Recipient a worldwide, non-assignable, non-sublicensable, non-transferable, non-exclusive, royalty-free copyright license to reproduce this Document and prepare derivative works of this Document that are products and services that integrate with the Real-Time Payments service provided by Payco (“Works”) and publicly display, publicly perform, distribute and sublicense the Works (the “License”). As a condition to exercising the rights and licenses granted hereunder, Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Works, it is Recipient's responsibility to acquire that license before distributing the Works.

The Document is the property of Payco and Payco retains all right, title, and interest in and to the proprietary rights expressed in this document and the information contained therein. Recipient shall not disclose the Document to any third party and no rights in the Document are granted other than those specifically authorized by the License. Any reproduction of the Document must reproduce this Agreement, including partial copies. The Document must be returned to Payco or the Works and Document must be destroyed immediately, upon Payco’s request. In the event of such a request, Recipient will provide a certification if it is a natural person, or a certification of a senior officer or executive if it is a representative of a juristic person, that all copies of the Document and Works have been destroyed or returned to Payco as required.

If you are a Participant, you acknowledge and agree that this agreement and the licenses granted hereunder are subject to your Participant Agreement and the Rules, and you agree that nothing herein shall relieve you of your obligation to comply with the foregoing. In the event of a conflict between this Agreement and the Participant Agreement or the Rules, the Participant Agreement or the Rules, as applicable, shall control.

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE DOCUMENT IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Recipient is solely responsible for determining the appropriateness of using the Document and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

Recipient shall, at its sole cost and expense, indemnify and hold Payco and its affiliates harmless from and against any and all damages arising out of or related to Recipient's use and reproduction of the document and works.

PAYCO SHALL HAVE NO LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR REPRODUCTION OF THE DOCUMENT OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER BY RECIPIENT, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against Payco or any affiliate of Payco (including a cross-claim or counterclaim in a lawsuit) alleging infringement of Recipient's patent(s), then the License of this Agreement shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use of the Document and Works as soon as reasonably practicable. However, Recipient's obligations under this Agreement shall continue and survive.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. Each party waives its rights to a jury trial in any resulting litigation.

1 DOCUMENT CONTROL

1.1 Change History

Version	Date	Comments
3.0	April 2022	<ul style="list-style-type: none"> • Addition of Message flows and definitions in Section 3 • Addition of BizSvc as an Optional tag under BAH • Modification in the multiplicity of Other field & addition of Proprietary field as Mandatory under Scheme name of Initiating Party for Pacs.008 and Pain.013 • Addition of UETR in all the applicable messages except Pacs.009 and Pacs.028 messages • Modification in the multiplicity of “Referred Documentation Information”. Added code(CINV) and Proprietary(CSCM & RTRN) codes under it for Pacs.008 and code(CINV) and Proprietary(CSCM) codes for Pain.013 • Addition of Original E2E ID field in Pain.014 • Addition of Name field under Debtor account and Creditor account fields of Pacs.008 and Pain.013 • Addition of Invoicer and Invoicee Structured Remittance information in Pacs.008 and Pain.013 • Updated the length of OrgID >> Othr >> Id tag to 1..35 in entire document except for Pain.014 and Camt.056 messages • Changes the color from Red to Black for the font present in 2.6.2 Identification chapter • Addition of Ultimate Debtor and Ultimate Creditor OrgID >> Othr >> Id & OrgID >> Othr >> Scheme Name have been added under Pacs.008 and Pain.013 • Modification from Mandatory to Conditional of Ultimate Debtor and Ultimate Creditor OrgID >> Othr >> LEI tag under Pacs.008 and Pain.013 • FIToFICstmrCdtTrf >> CdtTrfTxInf >> RmtInf >> Strd >> RfrdDocInf >> RltdDt Tag change from Mandatory to Conditional • Local instrument “IXB” has been added for the cross border payments under Pacs.008 and Pain.013 messages • MOC and multiplicity of Id, OrgId, Othr kept consistent for Pacs.008, Pain.013, Pain.014, Camt.056 and Camt.028 • Addition of DtAndPlcOfBirth and Scheme name under Pacs.008, Camt.028 and Pain.013 >> Ultimate Creditor and Ultimate Debotr >> PvtId Field • Changed the MOC of Cd and Prtry Tags under Rsn from M to C in Pain.014, Camt.056 and Pacs.002 • Added section 7.1.5 – Description for Interbank settlement in credit transfer message • Updated chapter 2.1 - Product Usage of Electronic signature under pain.013 and Pacs.008 messages and Product Usage of Ultimate Creditor and Ultimate Debtor of Camt.028 message
3.0	June 2022	<ul style="list-style-type: none"> • Added Original UETR under Interbank in both the Request for Information (camt.026) and the Response to Request for Information (camt.028).
3.0	January 2023	<ul style="list-style-type: none"> • Updated/Added language for distribution of IXB specifications in relevant sections • IXB Usage Clarity: <ul style="list-style-type: none"> ○ Updated Product Usage for Ultimate Debtor OrgID >> Othr >> SchmeNm >> Prtry (INDEX 2.762) under pacs.008 ○ Updated Product Usage for Ultimate Debtor Id >> PrvtId >> >> Othr >> SchmeNm >> Prtry (INDEX 2.774) under pacs.008

- Updated Product Usage for Ultimate Debtor Id >> OrgId >> Othr >> SchmeNm >> Prtry (INDEX 2.206) under pain.013
- Zelle Usage Clarity:
 - Updated Product Usage for Initiatg Party Id >> OrgId >> Othr >> Id (INDEX 2.821) under pacs.008
 - Updated Product Usage for Initiating Party Id >> OrgID >> Othr >> SchmeNm >> Prtry (INDEX 2.824) under pacs.008
- Added clarity in Product Usage for Remittance Information Strd >> RfrdDocInf >> Nb (INDEX 2.1354) under pacs.008
- Updated field length for Related Date (INDEX 2.900) under pain.013 to 10
- Updated the example used for an event unique to a Participant in section 16.1
- Updated Reason Code for Member Identification (INDEX 1.199) for camt.035 to RC03 for Routing and Transit number is not supported in RTP
- Added a note to the top of the pacs.009 section
- Added a note to the top of the acmt.022 section
- Updated Appendix A Supported Character set. Only & and < are highlighted to reflect current functionality
- Updated DUPL reason code in section 18.1.1 to indicate it may be used by FI
- Updated Descriptions for 1100 and NARR in section 18.2
- Added to Notes in the pacs.028 Scope
- Applied updates related to RFP Warranty from December 2022
 - Pain.013
 - Added rules for Debtor field
 - Updated product usage description for Remittance ID field
 - Camt.056
 - Updated scope to include RFP warranty
 - Added usage for UPAY code to include breach of RFP warranty
 - Updated product usage description for Additional Information field to include RFP breach of warranty procedure
 - Camt.029
 - Updated product usage description for Confirmation code field to include RFP breach of warranty procedure
 - Update Appendix B Error Codes
 - Updated description for UPAY code

Notes:

- IXB specifications will be shared separately with RTP Participants participating in the IXB service.

2 INTRODUCTION

2.1 Document Purpose

This document defines the standard product message formats used within the RTP® network for sending and receiving messages between RTP and Participants using the system. The messages described in this document will be implemented as part of RTP Release 3.0, which is currently planned for implementation during Q3 2023. All RTP Participants and Third-Party Service Providers will be expected to support the new message versions and certify their applications are in compliance with the updated message versions prior to the RTP Release 3.0 Implementation Date, which TCH will communicate in 2023.

TCH may update this document for clarity, but it is anticipated that the scope of the changes will remain the same.

Participants should use this document as a reference as they develop their systems to send and receive real-time messages to and from RTP.

It should be noted that in some instances, the terms, descriptions, or usages described in this document differ from terms and definitions used in the ISO 20022 standard. The terms, descriptions, and usages specified for RTP will apply to RTP related messages.

2.2 Scope

This document covers the following:

- The message structure of all messages used in RTP
- The required data types and usage rules of the data fields in these messages

This document does not include message flows for any message as the flows will remain the same as previously communicated. For new message types, flow descriptions have been provided in the “Scope” subsection of each chapter.

2.3 Acronyms

Acronym	Description
BAH	Business Application Header
ET	Eastern Time
ISO	International Standards Organization
TPSP	Third Party Service Provider
UNIFI	Universal Financial Industry Message scheme
XML	Extensible Mark-up Language

2.4 Key Fields

This section introduces key fields, such as Debtor and Creditor, which are used in RTP messages. These key elements are defined and their usage is explained in the context of the business transaction for purposes of RTP messaging. Please note, the nomenclature of the “ISO Elements” below is taken from the ISO 20022 standard. The “RTP Role” below translates the ISO Elements for RTP purposes.

ISO Element	RTP Role	Business Core Usage
Instructing Agent	Participant or TCH	<p>A Participant that initiates a message or instruction into RTP, or TCH when it initiates a system message to a Participant.</p> <p>RTP only utilizes the proprietary identifier (Routing and Transit number) for this element (not the IBAN or BIC).</p> <p>In this document, Instructing Agent is used to identify the Participant that submitted the payment instruction to RTP.</p> <p>The Instructing Agent for the pacs.008 message is the Debtor FI.</p>
Instructed Agent	Member FI or TCH	<p>The Participant that receives and processes a message or instruction from the Instructing Participant or TCH.</p> <p>RTP only utilizes the proprietary identifier for this element (Routing and Transit number).</p> <p>In this document, Instructed Agent is used to identify the Participant that receives the payment instruction or message from TCH.</p> <p>The Instructed Agent for the pacs.008 message is the Creditor FI.</p>
Creditor Account	Same	<p>For a Credit Transfer, the identification of the Creditor FI customer’s account.</p> <p>RTP only supports a proprietary identifier for this element (Account Number provided to Creditor FI customer by the Creditor FI).</p>
Creditor Agent	Creditor FI/Receiving FI	<p>The Creditor FI servicing the account for the Creditor.</p> <p>RTP only supports the proprietary identifier for this element (Routing and Transit number).</p>
Creditor	Receiver/Payee	<p>The party receiving payment.</p>
Ultimate Creditor	Same	<p>A person that is not a party to the RTP credit transfer but that has some connection to the purpose of the transfer and is identified for regulatory, compliance, remittance, or other purposes.</p> <p>The Ultimate Creditor’s name and proprietary account ID are required to be provided in RTP. Additional address information may also be included.</p>

ISO Element	RTP Role	Business Core Usage
Debtor Account	Sender/Payer	For a Credit Transfer, the identification of the Debtor FI customer's account. RTP only supports a proprietary identifier for this element (Account Number provided to Debtor FI customer by the Debtor FI).
Debtor Agent	Debtor FI/Sending FI	The Debtor FI servicing the account for the Debtor. RTP only supports the proprietary identifier for this element (Routing and Transit number).
Debtor	Sender/ Payer	The party sending payment.
Ultimate Debtor		A person that is not a party to the RTP credit transfer but that has some connection to the purpose of the transfer and is identified for regulatory, compliance, remittance, or other purposes. The Ultimate Debtor's name and proprietary account ID are required to be provided in RTP. Additional address information may also be included.
Message Identification	Same	The point to point identification of the payment instruction or response. This reference is assigned by the Instructing Agent to uniquely identify the message. Note that the message identification for a payment instruction is different from the message identification for the corresponding payment instruction response. Where RTP is sending a message from the Instructing Agent to the Instructed Agent the Message Identifier in the message received by RTP from the Instructing Agent is used in the message passed by RTP to the Instructed Agent (note: in a pacs.008 message this would be from the Debtor FI (Instructing Agent) to the Creditor FI (Instructed Agent)). The alphabetic and numeric sequences used in the Message Identification do not need to be the same as in the Business Message Identifier (BAH - head.001). Format see chapter 3.1 Reference Numbers (Identification)
Instruction Identification	Same	The Instruction Identifier is assigned by the Instructing Agent to uniquely identify a single Credit Transfer throughout its existence within RTP. The Instruction ID is the unique identifier that is persisted in the transactional database as the primary means of subsequent reference for the Credit Transfer instruction. Whereas the Message Identification uniquely identifies a message transaction (e.g. a pacs.008 message), the Instruction Identification uniquely identifies the instruction within that specific message (in this case the Credit Transfer instruction within the pacs.008 message). In cases where a pacs.008 message can contain multiple payment instructions (for example a bulk payment message), this can become particularly helpful. However, in the case of RTP, each message can only have one instruction. This means each payment transaction will have a unique Message Identification and only one unique Instruction Identification. RTP will use the Instruction ID to perform a check for a duplicate transaction within the duplicate checking period. The Instruction Identification is based on the format below. Format see chapter 3.1 Reference Numbers (Identification)
Transaction Identification	Same	The unique identifier, assigned by the first instructing agent to unambiguously identify the transaction that is passed on unchanged throughout the entire interbank chain. For the pacs.008 message in RTP this will carry the Payment Information ID from the Request For Payment message, if the pacs.008 is the result of a Request for Payment. When the pacs.008 does not originate with a pain.013, the Transaction ID must be equal to the Instruction ID.

ISO Element	RTP Role	Business Core Usage
End-to-End Identification	Same	The identifier assigned by the initiating party (i.e. the person or organisation submitting the Credit Transfer), to uniquely identify the transaction. This value should be known by both end-parties involved in the transaction, and is usually the customer assigned reference for the Credit Transfer. If the customer does not provide a reference number, the value "NOREF" should be included.
Clearing System Reference	Same	Identifies the Reconciliation Window in which the Credit Transfer was settled. This value will be set by RTP in any pacs.008, pacs.009 or related pacs.002 message sent by RTP to a Participant. It will represent the Reconciliation Window in which the message was processed/ settled by the System. For example, "001" means Reconciliation Window 1.
Interbank Settlement Date	Same	Identifies the date associated with the Reconciliation Window (Clearing System Reference). This value will be used in RTP (in conjunction with the Clearing System Reference) when a Credit Transfer is allocated to a particular Reconciliation Window.
Charge Bearer	N/A	This field, which is mandatory in the ISO format, specifies which party (or parties) will bear the charges associated with the processing of the Credit Transfer. For RTP the code "SLEV" is being used, which means charges will be based on established "Service Level Agreements" provided in the RTP Rules and Price Schedule.
Clearing System Code	Same	This code is used to specify the code for the Clearing System to be used to settle this Credit Transfer. For RTP the code "TCH" is being used.
Reject / Reason Code	Same	This field contains the reason code for the rejected message. Refer to the appendix for a list of Reason Codes.

2.5 Date / Time Format

All message processing dates are required to be set to Eastern Time (Eastern Standard Time or Eastern Daylight Time, as applicable under the Clean Energy Act of 2005) using ISO 8601 Standard format(24 hour clock) by the message sender. This includes the following fields:

- Creation Date Time
- Interbank Settlement Date (set by RTP)
- Requested Execution Date
- Expiry Date
- Date field within the Business Reference field
- Date field within the Message Identification field
- Date field within the Instruction Identification field
- Date field within the Payment Information Identification field

2.6 Regular Expression (RegEx) description

This chapter describes the usage of Regular Expressions used in the Schemas (XSDs) for element validations. Regular Expression are also defined as pattern in the XSD.

Character element	Description
[a-zA-Z]	Information inside square brackets defines the allowed values. These are seen as defined. Example used here means that only characters from A to Z or a to z are allowed.
[0-9]	Information inside square brackets defines the allowed values. These are seen as defined. Example used here means that only numbers (0 to 9) are allowed
{1,15}	Information inside curly brackets are used to define the minimum and maximum length of the element. Example used here means minimum 1 and maximum 15 characters
(abc)	Parentheses used to define character groups in the exact order
.	The full stop stands for any character
*	The asterisk '*' means repeatedly used (more occurrences)
	Alternation which allows for alternate matches. The character ' ' operates like the boolean OR
\	The back slash '\' is used before a special character to define in the expression. E.g '\+' this position must have a + (plus)

2.6.1 Usage in Currency, Country Code, Phone Number and LEI

Field	RegEx	Description
Currency Codes	[A-Z]{3,3}	Currency Code is 3 characters long and only uppercase characters
Country Code	[A-Z]{2,2}	Country Code is 2 characters long and only uppercase characters
Phone number	\+[0-9]{1,3}-[0-9()+\ -]{1,30}	First position fixed value '+' followed up to 3 numeric positions followed by the fixed value '-'. After these values up to 30 numeric characters including the values ()+\ and – can be used Example +1-55-123-4567 or +44-7808652880
LEI (Legal Entity Identifier)	[A-Z0-9]{18,18}[0-9]{2,2}	First 18 characters can be uppercase characters or numbers and the last two characters must be numeric – overall the element is 20 characters long (18+2)

2.6.2 Identifications

Format of Message Identification is MYYYYMMDDbbbbbbbbbbBAAAAnnnnnnnnnn but only the values in bold are validated

M[0-9]{4}(((01|03|05|07|08|10|12)((0[1-9])|((1-2)[0-9])|(3[0-1])))|((04|06|09|11)((0[1-9])|((1-2)[0-9])|30))|((02)((0[1-9])|((1-2)[0-9]))))[A-Z0-9]{11}.*

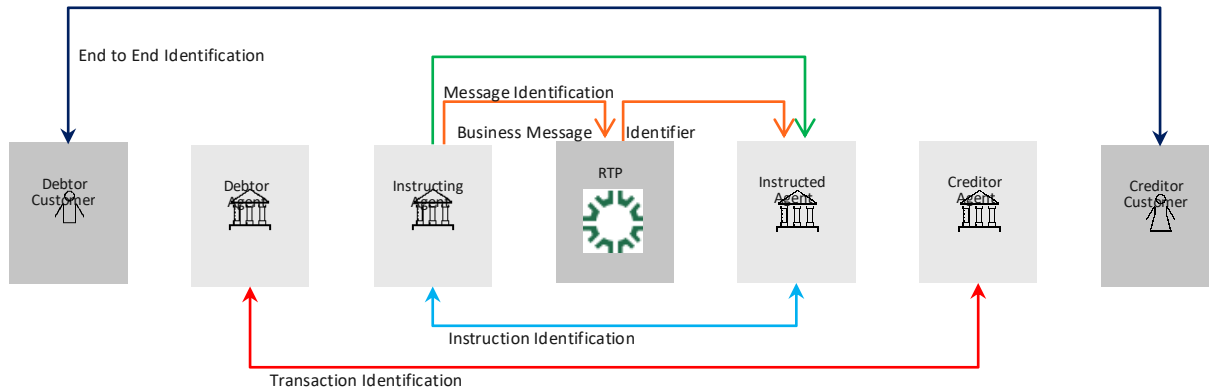

RegEx	Description
M	Fixed value M
[0-9]{4}	Validation for 4 digit of year
(Start for first character group
(Start for second character group
(01 03 05 07 08 10 12)	Character group to identify the month – in this case all the month with 31 days
((0[1-9]) ([1-2][0-9]) (3[0-1]))	Character groups to identify the days for the above defined month as first group is for 01 to 09, second group is for 10 to 19 and 20 to 29 as last group only for 30 and 31
)	End for second character group
	First alternative second group afterwards
(Start for first alternative second character group
(04 06 09 11)	Character group to identify the month – in this case all the month with 30 days
((0[1-9]) ([1-2][0-9]) (3[0-1]))	Character groups to identify the days for the above defined month as first group is for 01 to 09, second group is for 10 to 19 and 20 to 29 as last group only for 30.
)	End for alternative second character group
	Second alternative second group afterwards
(Start for second alternative second character group
(02)	Character group to identify the month – in this case only February
((0[1-9]) ([1-2][0-9]))	Character groups to identify the days for the above defined month as first group is for 01 to 09, second group is for 10 to 19 and 20 to 29.
)	End for second alternative second character group
)	End for first alternative group
[A-Z0-9]{11}	Validation for Participant ID which is 11 characters long. Only upper case and numbers are allowed
.*	Any characters up to the full length of the field

For Business Message Identifier the same logic as above applies except the first character is a fixed value 'B'

Same applies for Identification Identifier with the difference that the first character is not used and therefore not defined.

3 IDENTIFICATION USAGE AND DEFINITIONS

3.1 Reference Numbers (Identification)

Identification Type	Description
Business Message	Business Message Identifier in the Business Application Header (BAH) is used as a point to point reference between Agents and the RTP network.
Message	Message Identification is used as point to point reference between Agents
Instruction	Instruction Identification is used between the Instructing Agent and Instructed Agent and is the relevant reference which the RTP network uses to perform duplicate checking for Credit Transfer (pacs.008).
Transaction	In standalone Credit Transfer (pacs.008) the Transaction Identification matches the Instruction Identification. For Credit Transfers (pacs.008) initiated in response to a Request for Payment (pain.013) the Transaction Identification is used to identify the 'payment information identifier' that is passed on, unchanged, throughout the entire interbank chain.
End to End	End to End Identification is used between Debtor and Creditor (Banks customer) and needs to be passed unchanged through the full message chain If not present the value 'NOREF' should be used.

3.1.1 Business Message Identifier

Used for the point to point reference in the Business Application Header for all Messages.

Format : BYYYYMMDDbbbbbbbbbbXAAAnnnnnnnnnnn

Designation	Description	Length / Format
B	Prefix 'B'	1 alphabet character
YYYYMMDD	File creation date	8 numeric characters
bbbbbbbbbb	Participant Identification	11 alphanumeric characters
X	Message Generation Source: <ul style="list-style-type: none"> 'B' – Message generated by a Participant 'H' – Message generated by RTP 	1 character
AAA	Participant Discretionary Serializer	3 alphanumeric characters
nnnnnnnnnn	Message serial number	11 numeric characters

3.1.2 Message Identification / Assignment Identification

Reference used between Instructing and Instructed Agent to uniquely identify the message. The RTP network is passing this information on to the Instructed Agent.

Format : MYYYYMMDDbbbbbbbbbbXAAAnnnnnnnnnn

Designation	Description	Length / Format
M	Prefix 'M'	1 alphabet character
YYYYMMDD	File creation date	8 numeric characters
bbbbbbbbbb	Participant Identification	11 alphanumeric characters
X	Message Generation Source: <ul style="list-style-type: none"> 'B' – Message generated by a Participant 'H' – Message generated by RTP 	1 character
AAA	Participant Discretionary Serializer	3 alphanumeric characters
nnnnnnnnnn	Message serial number	11 numeric characters

3.1.3 Instruction Identification (for duplicate checking)

Instruction Identification is used for uniqueness and for duplicate checking in the Credit Transfer (pacs.008). Payment Information Identification is used for uniqueness and for duplicate checking in the Request for Payment (pain.013). This same ID should also be used in the Message Status Report (pacs.002).

Format: YYYYYMMDDbbbbbbbbbbXAAAnnnnnnnnnn

Designation	Description	Length / Format
YYYYMMDD	File creation date	8 numeric characters
bbbbbbbbbb	Participant Identification	11 alphanumeric characters
X	Message Generation Source: <ul style="list-style-type: none"> 'B' – Message generated by a Participant 'H' – Message generated by RTP 	1 character
AAAA	Participant Discretionary Serializer	4 alphanumeric characters
nnnnnnnnnn	Message serial number	11 numeric characters

3.1.4 Transaction Identification

Transaction Identification is a unique identification to unambiguously identify the transaction that is passed on, unchanged, throughout the entire interbank chain. Format:

YYYYMMDDbbbbbbbbbbXAAAnnnnnnnnnn

Designation	Description	Length / Format
YYYYMMDD	File creation date	8 numeric characters
bbbbbbbbbb	Participant Identification	11 alphanumeric characters

Designation	Description	Length / Format
X	Message Generation Source: <ul style="list-style-type: none"> 'B' – Message generated by a Participant 'H' – Message generated by RTP 	1 character
AAAA	Participant Discretionary Serializer	4 alphanumeric characters
nnnnnnnnnn	Message serial number	11 numeric characters

3.2 Identification Linkages

3.2.1 Standard Credit Transfer (pacs.008)

Standard Credit Transfer with immediate Response using Message Status Report (pacs.002).

Note: these are the tags that should be propagated for message identification. There may be other tags expected to be carried forward as well, but are not used for unique identification.

4 MESSAGE FORMAT DESCRIPTION

RTP supports the ISO 20022 message standard also known as the Universal Financial Industry Message scheme (UNIFI) for the communication between its Participants and the System. In cases where the ISO 20022 message format does not cater to certain communications (e.g. Participant Sign-On to the System), proprietary messages based on the ISO 20022 data dictionary have been defined. The specific schemas relating to the supported RTP message formats are available to all Participants in the RTP Scheme and must be adhered to when constructing and processing messages.

RTP messages are made up of Message Blocks comprising a Business Application Header (BAH) and the Business Payload.

The table below shows the list of the RTP messages and their constituent components:

Business Area	Message ID ¹	Message Name	Description
Header	head.001.001.01	BusinessApplicationHeader	Business Application Header containing information on routing and message features
Payments Clearing and Settlement	pacs.008.001.08	FIToFICustomerCreditTransferV08	Credit Transfer message
	pacs.002.001.10	FIToFIPaymentStatusReportV10	Message Status Report of Credit Transfer message
Creditor Payment Activation Request (Request for Payment)	pain.013.001.07	CreditorPaymentActivationRequestV07	Request for Payment
	pacs.002.001.10	FIToFIPaymentStatusReportV10	Message Status Report of Request for Payment
	pain.014.001.07	CreditorPaymentActivationRequestStatusReportV07	Response to Request for Payment
	pacs.002.001.10	FIToFIPaymentStatusReportV10	Message Status Report of Response to Request for Payment
System Time-out Message & Request for Return of Funds	camt.056.001.08	FIToFIPaymentCancellationRequestV08	This message is used for two different business scenarios <ul style="list-style-type: none"> Payment Instruction cancellation after a time-out at the Creditor

¹ The latest ISO 20022 versions were published on 20th February 2019 at the ISO 20022 website.

Business Area	Message ID ¹	Message Name	Description
			FI <ul style="list-style-type: none"> Debtor FI Request for Return of Funds from the Creditor FI (Note: this is an FI to FI investigation message).
	pacs.002.001.10	FItoFIPaymentStatusReportV10	Message Status Report of System Time-out Message or Request for Return of Funds
	camt.029.001.09	ResolutionOfInvestigationV09	Response (reject or accept) to Request for Return of Funds. (Note: this is an FI to FI investigation message).
	pacs.002.001.10	FItoFIPaymentStatusReportV10	Message Status Report of Response to Request for Return of Funds
Stand-alone Remittance Advice	remt.001.001.04	RemittanceAdviceV04	Provide additional remittance information outside of the standard payment message (pacs.008)
	pacs.002.001.10	FItoFIPaymentStatusReportV10	Message Status Report of Stand-alone Remittance Advice.
Request for Information	camt.026.001.07	UnableToApplyV07	Request for Information (RFI) message

FI to FI Credit Transfer	pacs.009.001.08	FinancialInstitutionCreditTransferV08	Financial Institution Credit Transfer
	pacs.002.001.10	FItoFIPaymentStatusReportV10	Message Status Report of FI Credit Transfer

Business Area	Message ID ¹	Message Name	Description
Message Status Request	pacs.028.001.03	FIToFIPaymentStatusRequestV03	Request about a status of a Credit Transfer or non-value Business Message
	pacs.002.001.10	FIToFIPaymentStatusReportV10	Message Status Report to Status Request
Token Identification	acmt.022.001.02	IdentificationModificationAdviceV02	Advice to Token update based on Payee Standing Order
	pacs.002.001.10	FIToFIPaymentStatusReportV10	Message Status Report of Token Identification
Sign-on	admn.001.001.01	SignOnRequest	Initiate a Sign-On
	admn.002.001.01	SignOnResponse	Response to a Sign-On Request
Sign-off	admn.003.001.01	SignOffRequest	Initiate a Sign-Off
	admn.004.001.01	SignOffResponse	Response to a Sign-Off Request
Echo	admn.005.001.01	EchoRequest	Connectivity status check (i.e. heartbeat) between the Participant FI and RTP
	admn.006.001.01	EchoResponse	Response to an Echo Request
Participants Unable to Transact	admn.007.001.01	DatabaseReportRequest	Request to list all participants which are unable to transact
	admn.008.001.01	DatabaseAvailabilityReport	Response with all participants which are unable to transact

4.1 Character Set

The UNIFI (ISO 20022) XML messages allow for the full range of global language requirements (UTF-8). The UNICODE character set, encoded in UTF-8, is the official ISO 20022 character set.

RTP does not support a full UTF-8 character set. Please refer to the appendix “TCH RTP Supported Character Set” for a list of supported characters within RTP messages.

4.2 XML Element Format

The detail of how each ISO 20022 standard XML Element is to be used is included within the Message Structure Description. There are two aspects to the XML Element usage. First, there is an

occurrence notation (e.g. [1..1]), which defines the rule for the element within the ISO standard. The occurrence indicates whether the element is a mandatory or an optional element with the first character in the notation. A value of '1' indicates the field is mandatory and a '0' indicates it is optional. If an element is conditional, the value of '1' will still appear and an '{or ... or}' notation will be included with the other element that must be present. The second character indicates how many occurrences of the element can be used. This value starts at '1' occurrence of the element and can go up to an unlimited number 'n'. The table below provides examples on how the occurrence notations are used in this document:

Notation	Description
[1..1]	Is a mandatory single Element with one occurrence
[0..1]	Is an optional Element with one occurrence
[0..n]	Is an optional Element with unlimited occurrences

For the adoption to the RTP needs some of the original ISO standard occurrences had to be amended.

In addition to the ISO notations, the Message Structure Description includes a column that defines the usage of the element within RTP. There may be cases where an element that is optional within the ISO standard is mandatory within RTP.

The RTP usage definitions are as follows:

- M – Mandatory, this is a mandatory field in RTP even if it can be optional according to the ISO 20022 definition
- O – Optional, this is an optional field in RTP and is always an optional field according to ISO 20022
- C – Conditional, means that the field usage in RTP is on a conditional basis (as specified within the individual field description) and is always an optional field according to ISO 20022

4.3 ISO Information Detailed Message Field Description

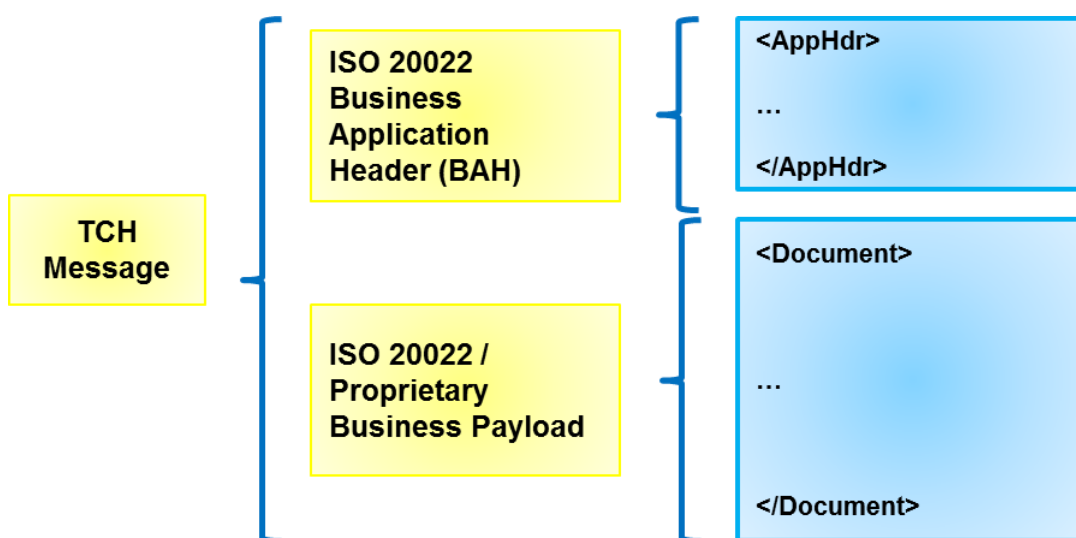

All Detail Message Field Descriptions in this document provide information regarding the usage of each field in each message. In some cases there are two different definitions for a single field, the ISO Description and the Product Usage. The ISO Description always provides the definition of the field according to ISO 20022. The Product Usage definition describes the field's specific usage within RTP. If the ISO Description and the Product Usage are the same, only the ISO Description is provided.

5 OVERALL MESSAGE STRUCTURE

This section of the document provides an overview of the ISO 20022 Message Structure (made up of a Business Application Header and the Business Payload) that is used in RTP messages. The Business Payload of a message may be split into many Message Blocks, which can be further broken down into even smaller Message Blocks with a single, or multiple, occurrence(s) within the message, depending on the purpose of the message. In order to form a valid message structure, these Message Blocks must be arranged in a specific hierarchy.

5.1 Message Structure

The figure below shows the high level message structure of a RTP message.

5.2 Business Application Header

The purpose of the Business Application Header (BAH) is to segregate information important for routing a message (such as the sender or receiver of a message, whether the message is a repeat message, identifying the security signature on the message, determining the message priority, etc.) from the business payload. This allows the pertinent information in the BAH to be made readily available to the business applications without having to open and read the message's business payload.

5.3 Business Payload

The business payload is made up of different Message Blocks including (but not limited to) a group header block and transaction information block. The arrangement of these Message Blocks is done in accordance with the definition of an ISO 20022 message or a proprietary message that has been designed for the System. For those messages that are ISO 20022 messages, the Message

Blocks are built in accordance to the list of approved ISO 20022 message definitions or schemas. For example: the “FI To FI Customer Credit Transfer – pacs.008.001.07” message schema defines the format and content of the message blocks in the pacs.008 message used in the System.

5.4 Sample RTP Message Structure

The table below shows an example of the high level Message Blocks and Hierarchy of the RTP Credit Transfer message used in the System.

FI to FI Customer Credit Transfer	pacs.008.001.08
Block Name	Occurrence
Business Application Header	(1..1)
Group Header	(1..1)
Customer Credit Transfer Transaction Information	(1..1)

The first Message Block in an RTP payment message is always the Business Application Header (BAH). The subsequent Message Blocks, after the BAH, are constructed in accordance with the defined schemas of the different message types (e.g. pacs.008 Group Header, Customer Credit Transfer Transaction Information, etc.).

5.5 Message Schema

The table below shows the ISO Schemas that define the specific RTP messages including the Business Application Header and the Payload Messages. The BAH for RTP messages (head.001.001.01) is defined in further detail later in this document.

Message Description	Namespace Prefix	ISO Schema	Non-ISO Schema
Business Application Header			
Header	head	head.001.001.01	-
Business Messages			
Credit Transfer	ct	pacs.008.001.08	-
Message Status Report of Credit Transfer	ps	pacs.002.001.10 ²	-
Request for Payment	pr	pain.013.001.07	-
Response to Request for Payment	rp	pain.014.001.07	-

² The schema is identical even if it is used in different response situations

Message Description	Namespace Prefix	ISO Schema	Non-ISO Schema
System Time-out Message & Request for Return of Funds	rt	camt.056.001.08	-
Response to Request for Return of Funds	tr	camt.029.001.09	-
Stand-alone Remittance Advice	ar	remt.001.001.04	-
Request for Information	fi	camt.026.001.07	-
Response to Request for Information	if	camt.028.001.09	-
Payment Acknowledgement	ac	camt.035.001.05	-
FI to FI Credit Transfer	c9	pacs.009.001.08	-
Message Status Request	s8	pacs.028.001.03	-
Token Identification	a2	acmt.022.001.02	
System / Administration Messages			
Message Status Report to all non-value Business Messages	ps	pacs.002.001.10 ³	-
Message Reject	mr	admi.002.001.01	-
System Event Notification Message	ne	admi.004.001.02	-
Sign-on Request	sr	-	admn.001.001.01
Sign-on Response	rs	-	admn.002.001.01
Sign-off Request	fr	-	admn.003.001.01
Sign-off Response	rf	-	admn.004.001.01
Echo Request	er	-	admn.005.001.01
Echo Response	re	-	admn.006.001.01
Participant Unable to Transact	ut	-	admn.007.001.01
Participant Unable to Transact Response	tu	-	admn.008.001.01

³ The schema is identical even if it is used in different response situations

6 MESSAGE STRUCTURE SPECIFICATION BUSINESS APPLICATION HEADER

6.1 Business Application Header – head.001.001.01

This chapter provides an overview of the mandatory Business Application Header which includes the following:

- The message structure of the head.001.001.01 message which is used as the mandatory Business Application Header (BAH) in all RTP messages
- The required data types and usage rules of the data fields in the BAH
- Sample layouts of the defined message format

All examples use the Credit Transfer message (pacs.008) as the payload.

The BAH is included in the schema validation which the system performs in order to check each message for the following:

- Structural validation of the message, both the BAH and the attached payload
- Syntax validation of the message, both the BAH and the attached payload
- Authorized Sender – only BAH
- Digital Signature – only BAH

6.1.1 Scope

The purpose of the Business Application Header (BAH) is to separate the routing and message specific information (such as the identity of the Endpoint sending the message and the type of message) from the Payload (message content, such as dollar value). This allows for the business applications receiving the message to retrieve the information required for the business application to send and receive a message without having to parse the message payload. The BAH is mandatory and used in the routing of every RTP message.

Note: The ‘From’ and ‘To’ identifications refer to the physical parties directly participating in that step (‘leg’) of the message chain. In the leg of the transaction between the Instructing Agent (Debtor FI or Third Party Service Provider – TPSP – to the Debtor FI) and the System, the ‘From’ would be the Instructing Agent and the ‘To’ would be the System. For the leg of transaction between the System and the Instructed Agent (Creditor FI or TPSP to the Creditor FI), the ‘From’ would be the System and the ‘To’ would be the Instructed Agent.

6.1.2 Usage of Member ID within the Business Application Header

The Business Application Header identifies the technical endpoints for a specific message leg. In other words, when a participant submits any message to any other participant through RTP, the

Participant ID of the sending participant (or the TPSP ID of the participant’s Third-Party Service Provider) will be the “Member ID” within the “FROM” element, while the Participant ID for RTP will be the “Member ID” within the “TO” element. When RTP forwards that request on to the receiving participant, it will create a new Business Application Header in which the Participant ID for RTP is the “Member ID” within the “FROM” element, while the Participant ID of the Receiving Participant is the “Member ID” within the “TO” element.

When a connection is owned by a Third-Party Service Provider, the endpoint identified as described above will be the 11-digit Third-Party Service Provider ID (TPSP ID).

Figure 1: Member ID usage within BAH (pacs.008 use case)

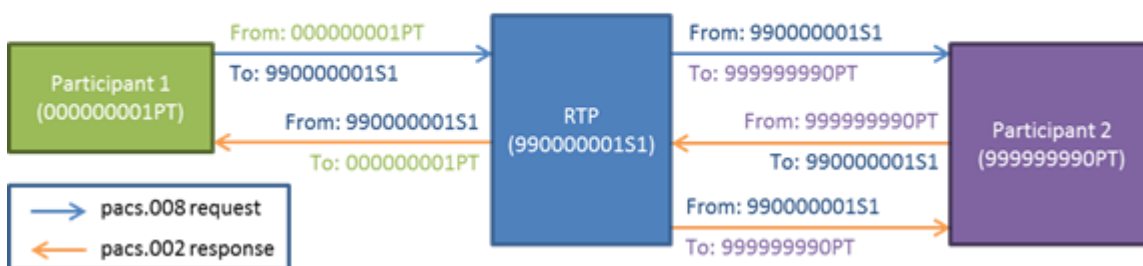

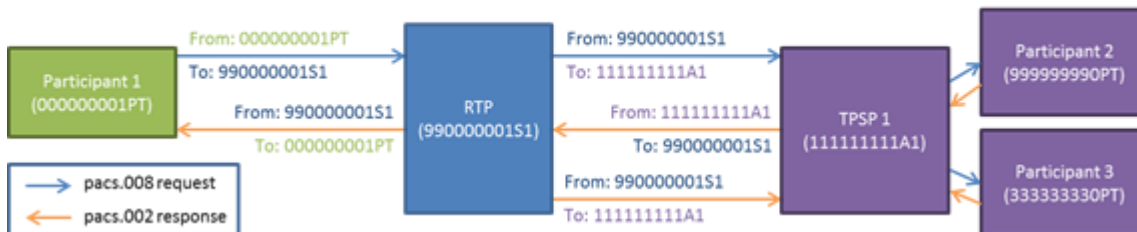

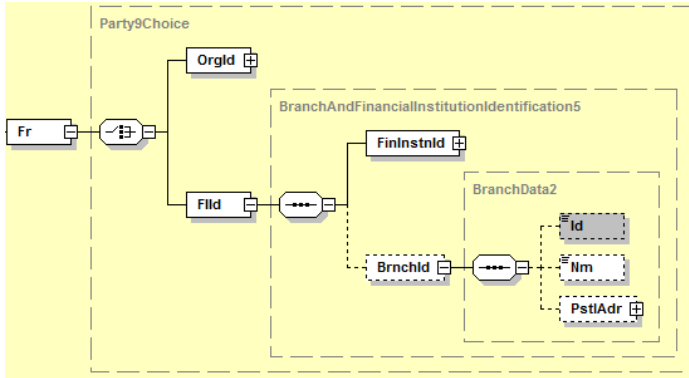

Figure 2: Member ID usage within BAH (Participant via TPSP pacs.008 use case)

6.1.3 Branch ID usage

Within certain messages, the System uses the Branch ID field in order to ensure that response messages are sent back to the appropriate party via the correct connection. Where this is necessary, the system will populate the element BranchID Identification under the “FROM” element in the outgoing message (RTP to receiving FI). Whenever the receiving party receives an incoming message from RTP where the “FROM” BranchID has been populated, the receiving party must copy the content of this field into the “TO” BranchID of the corresponding response message that it sends back to RTP. If this information is not copied into the correct field, the System will reject the incoming response message with a structural error.

Information from RTP to Participating FI element ‘Branch Id’ in field ‘Id’

Information from Participant FI to RTP element 'Branch Id' in field 'Id'

6.1.4 Message Structure Description

Note: The signature element is provided as a representative illustration. Full details regarding Digital Signatures are provided in the RTP Customer Documentation System Interface Guide.

6.1.6 Example

These are examples of the Business Application Header in the XML format used with the payload of a Credit Transfer (pacs.008) and the Message Status Report (pacs.002).

Note: The signature element is only representative and is part of the technical implementation during the on-boarding to the system. Detail information about Digital Signature is provided in the RTP Customer Documentation System Interface Guide.

Example Message Initiating Agent (Debtor FI) to RTP:

```

7 MESSAGE STRUCTURE SPECIFICATION CREDIT TRANSFER

7.1 Credit Transfer Message – pacs.008.001.08

This chapter defines the standard product message formats used by the TCH Real Time Payment system (RTP) for sending and receiving Credit Transfer messages, between the RTP and Participants using the System.

This chapter covers the following:

- The message structure of the pacs.008 message used in RTP
- The required data types and usage rules of the data fields in these messages

7.1.1 Scope

An Instructing Agent will use the “FI To FI Customer Credit Transfer Message” to initiate a Credit Transfer. This message is sent by a Debtor FI to a Creditor FI through RTP.

It should be noted that in circumstances when the Debtor FI needs to send a Repeat Credit Transfer Request (i.e. the Debtor FI does not receive a response to their original pacs.008 message from the System and sends a repeat message to RTP), the message payload is identical to the original pacs.008 message but the Copy Duplicate <CpyDplct> data element is added with a value of “DUPL” in the Business Application Header.

Response to the Credit Transfer (pacs.008) is provided via the Message Status Report (pacs.002). Response can either be Accepted, Accepted w/o Posting, or Rejected.

7.1.2 Message Structure Description

Index	XML Tag	Element Name	Occurr.	Length	M/O/C

Usage: The instructing party has to make sure that MessageIdentification is unique per instructed party for a pre-agreed period.</p> <p>Product Usage: Assigned by the Instructing Agent (Debtor FI) to uniquely identify the pacs.008 message. The Instructing Agent (Debtor FI) is responsible for ensuring the uniqueness of this message identification.</p> <p>XML Tag: <MsgId></p> <p>Occurrence: [1..1]</p> <p>Format: Format: MYYYYMMDDbbbbbbbbbbBAAAnnnnnnnnnnn Pos. 01-01 - Prefix 'M' Pos. 02-09 - File creation date in format YYYYYMMDD Pos. 10-20 - Participant ID (11 characters) Pos. 21-21 - Message generation source ("B" if generated by a Participant) Pos. 22-24 - Discretionary bank field (3 digit alpha numeric that can be used to serialize, identify specific systems, etc.) Pos. 25-35 - Message serial number (can be up to 11 numeric characters)</p> <p>RegEx: M[0-9]{4}(((01 03 05 07 08 10 12)((0[1-9]) ([1-2][0-9]) (3[0-1]))) ((04 06 09 11)((0[1-9]) ([1-2][0-9]) 30)) ((02)((0[1-9]) ([1-2][0-9])))))[A-Z0-9]{11}.*</p> <p>Length: 35</p> <p>Rule(s): The first 20 characters of Message Identification are validated for structural alignment in accordance with the format specification.</p> <p>Reason Code(s): If structural validation fails, the RTP Network will reject with code '650' in Administration Advice message (admi.002).</p> <p>Note(s): The Message Identifier in the message received by RTP passes untouched by RTP to the Instructed Agent (Creditor FI).</p>

Element	Details
INDEX: 1.2 FIToFICstmrCdtTrf +GrpHdr ++CreDtTm	<p>Note that the message identification for a Credit Transfer (pacs.008) is different than the message identification generated for the corresponding Message Status Report (pacs.002) message.</p> <p>Example: M2017111202120020101BTRF00000000011</p> <p>Name: Creation Date Time</p> <p>ISO Description: Date and time at which the message was created.</p> <p>XML Tag: <CreDtTm></p> <p>Occurrence: [1..1]</p> <p>Format: YYYY-MM-DDThh:mm:ss</p> <p>Length: 19</p> <p>Rule(s): Creation Date Time must be within 1 calendar day of the system's date/time.</p> <p>Reason Code(s): Reject with code 'DT04' in pacs.002 for failing validation.</p> <p>Note(s): The Creation Date Time is the creation of the pacs.008 message itself, not when the customer request is initiated through a front-end channel, or the payment is assigned to a batch process, or any other activity that occurs prior to the creation of the pacs.008 message. The date is required to be set to Eastern Time (ET).</p> <p>Example: 2017-11-12T10:05:00</p>
INDEX: 1.4 FIToFICstmrCdtTrf +GrpHdr ++NbOfTxS	<p>Name: Number Of Transactions</p> <p>ISO Description: Number of individual transactions contained in the message.</p> <p>XML Tag: <NbOfTxS></p> <p>Occurrence: [1..1]</p> <p>RegEx: [1]{1,1}</p> <p>Length: 1</p> <p>Rule(s): Expected value is '1'.</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002).</p> <p>Note(s): Only one Credit Transfer per pacs.008 message is permitted within RTP.</p> <p>Example: 1</p>
INDEX: 1.6 FIToFICstmrCdtTrf +GrpHdr ++TtlIntrBkSttlmAmt	<p>Name: Total Interbank Settlement Amount</p> <p>ISO Description: Total amount of money moved between the instructing agent and the instructed agent.</p> <p>Product Usage: The total amount that the Debtor FI will be obligated to pay the Creditor FI upon the Creditor FI's acceptance of the payment instructed by the Credit Transfer (pacs.008) message.</p> <p>XML Tag: <TtlIntrBkSttlmAmt></p>

Element	Details
	<p>Occurrence: [1..1]</p> <p>Rule(s): Currency must be a currency that is supported by RTP. Total Interbank Settlement Amount is equal to Interbank Settlement Amount.</p> <p>Reason Code(s): In case for structural validation failure, the RTP Network will reject with code '650' in Administration Advice message (admi.002) if:</p> <ul style="list-style-type: none"> - The value of the request is less than or equal to zero - The value is greater than supported by the ISO definition for the maximum number of digits - The currency code is not valid - The number of decimal digits is greater than the specified number of digits as defined by the ISO4217 definition <p>Reject with code 'AM12' in Message Status Report (pacs.002) if Total Interbank Settlement Amount is not equal to Interbank Settlement Amount.</p> <p>Note(s): The maximum decimal digits allowed are two.</p> <p>Example: 525.25</p> <p>Frac Digits: 2</p> <p>Total Digits: 18</p>
<p>INDEX: 1.7</p>	<p>Name: Currency</p> <p>ISO Description: A code allocated to a currency by a Maintenance Agency under an international identification scheme as described in the latest edition of the international standard ISO 4217 "Codes for the representation of currencies and funds".</p> <p>XML Tag: <Ccy></p> <p>RegEx: [A-Z]{3,3}</p> <p>Length: 3</p> <p>Rule(s): Only Currency supported by RTP is US Dollar</p> <p>Reason Code(s): Reject with code 'AM11' in Message Status Report (pacs.002) if the currency code is not supported by RTP.</p> <p>Example: USD</p> <p>Permitted Codes</p> <p>USD US Dollar</p>
<p>INDEX: 1.8</p> <p>FItoFICstmrCdtTrf +GrpHdr ++IntrBkSttlmDt</p>	<p>Name: Interbank Settlement Date</p> <p>ISO Description: Date on which the amount of money ceases to be available to the agent that owes it and when the amount of money becomes available to the agent to which it is due.</p> <p>Product Usage: Date of the Reconciliation Window within which this transaction is processed and settled.</p>

Element	Details
	<p>If a message starts being processed at the end of a Reconciliation Window and during processing crosses into another Reconciliation Window, the date of the Reconciliation Window during which the process started will be used.</p> <p>XML Tag: <IntrBkSttlmDt></p> <p>Occurrence: [1..1]</p> <p>Format: YYYY-MM-DD</p> <p>Length: 10</p> <p>Rule(s): Must be a valid reconciliation window date. Date must be the date of the Reconciliation Window within which the transaction is processed.</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) in case of invalid date structure</p> <p>Note(s): Interbank Settlement Date must be sent on all Credit Transfer messages sent by participants (as required according to ISO 20022 standards). However, if the provided date in the initial Credit Transfer request message from the Debtor FI is not identical to the actual Reconciliation Window date within the system, RTP will replace the date provided by the Debtor FI with the Reconciliation Window date within the system.</p> <p>In this scenario, the Debtor FI will be made aware of the system Reconciliation Window date when it is returned in the Message Status Report (pacs.002) sent in response to the Credit Transfer request (see TCH RTP Message Status Report – Index 3.289). To reconcile its transaction logs against RTP reports, the Debtor FI should always use the date provided by RTP in the Message Status Report as the date associated with the Reconciliation Window in which the transaction will be included in reports.</p> <p>See Section 7.1.5 for more information.</p> <p>Example: 2017-11-12</p>
<p>INDEX: 1.9</p> <p>FItoFICstmrCdtTrf +GrpHdr ++SttlmInf</p>	<p>Name: Settlement Information</p> <p>ISO Description: Specifies the details on how the settlement of the transaction(s) between the instructing agent and the instructed agent is completed.</p> <p>Product Usage: Specifies the means of settlement for the Credit Transfer. For RTP settlement will always be effectuated by RTP.</p> <p>XML Tag: <SttlmInf></p> <p>Occurrence: [1..1]</p>
<p>INDEX: 1.10</p> <p>FItoFICstmrCdtTrf +GrpHdr ++SttlmInf +++SttlmMtd</p>	<p>Name: Settlement Method</p> <p>ISO Description: Method used to settle the (batch of) payment instructions.</p> <p>Product Usage: Method used to settle the single Credit Transfer processed through RTP.</p> <p>XML Tag: <SttlmMtd></p>

Element	Details
	<p>Occurrence: [1..1] Length: 4 Rule(s): Expected value of 'CLRG' Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if the Settlement Method is not valid. Note(s): Only 'CLRG' is allowed per scheme definition. Example: CLRG</p>
	<p>Permitted Codes</p> <p>CLRG ClearingSystem</p>
<p>INDEX: 1.30 FIToFICstmrCdtTrf +GrpHdr ++SttlmInf +++ClrSys</p>	<p>Name: Clearing System ISO Description: Specification of a pre-agreed offering between clearing agents or the channel through which the payment instruction is processed. Product Usage: Identification of the Real Time Clearing system for RTP. XML Tag: <ClrSys> Occurrence: [1..1] Note(s): Only Element Code available.</p>
<p>INDEX: 1.31 FIToFICstmrCdtTrf +GrpHdr ++SttlmInf +++ClrSys ++++Cd</p>	<p>Name: Code ISO Description: Infrastructure through which the payment instruction is processed, as published in an external clearing system identification code list. Product Usage: The clearing channel through which the Credit Transfer instruction is processed. XML Tag: <Cd> Occurrence: [1..1] Length: 3 Rule(s): The identifier of the Clearing House is used for Credit Transfer. Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if the Clearing System Code is not valid. Note(s): Only 'TCH' as clearing code is allowed. Example: TCH</p>
	<p>Permitted Codes</p> <p>TCH US - The Clearing House Real Time Payment System (RTP)</p>
<p>INDEX: 2.0</p>	<p>Name: Credit Transfer Transaction Information</p>

Element	Details
FIToFICstmrCdtTrf+CdtTrfTxInf	<p>ISO Description: Set of elements providing information specific to the individual credit transfer(s).</p> <p>XML Tag: <CdtTrfTxInf></p> <p>Occurrence: [1..1]</p> <p>Note(s): Only one Credit Transfer Information element allowed.</p>
INDEX: 2.1 FIToFICstmrCdtTrf+CdtTrfTxInf ++PmtId	<p>Name: Payment Identification</p> <p>ISO Description: Set of elements used to reference a payment instruction.</p> <p>XML Tag: <PmtId></p> <p>Occurrence: [1..1]</p>
INDEX: 2.2 FIToFICstmrCdtTrf+CdtTrfTxInf ++PmtId +++InstrId	<p>Name: Instruction Identification</p> <p>ISO Description: Unique identification, as assigned by an instructing party for an instructed party, to unambiguously identify the instruction.</p> <p>Usage: The instruction identification is a point to point reference that can be used between the instructing party and the instructed party to refer to the individual instruction. It can be included in several messages related to the instruction.</p> <p>Product Usage: The Instruction Identifier is assigned by the Debtor FI to uniquely identify a single Credit Transfer within a pacs.008 throughout its existence within RTP. The Instruction ID is the unique identifier that is persisted in the transactional database as the primary means of subsequent reference for the Credit Transfer (i.e. for reports and inquiries). The uniqueness of an instruction is determined by the Instruction Identification and is based on the format below. RTP will use the Instruction ID to perform a check for a duplicate transaction within the duplicate checking period and as a reference to the payment instruction in other non-payment messages (i.e. Payment Acknowledgment by Receiver, Request for Information, etc.).</p> <p>XML Tag: <InstrId></p> <p>Occurrence: [1..1]</p> <p>Format: Expected format: YYYYMMDDbbbbbbbbbbBAAAAnnnnnnnnnnn Pos. 01-08 - File creation date in format YYYYMMDD Pos. 09-19 - Participant ID (11 characters) Pos. 20-20 - Message generation source ("B" if generated by a Participant) Pos. 21-24 - Discretionary bank field (4 digit alpha numeric that can be used to serialize, identify specific systems, etc.) Pos. 25-35 - Message serial number (11 numeric characters)</p> <p>RegEx: [0-9]{4}(((01 03 05 07 08 10 12)((0[1-9]) ([1-2][0-9]) (3[0-1])) ((04 06 09 11)((0[1-9]) ([1-2][0-9]) 30)) ((02 ([0[1-9]) ([1-2][0-9])))))[A-Z0-9]{11}.*</p> <p>Length: 35</p> <p>Rule(s): The first 20 characters of Instruction Identification are validated for structural alignment in accordance with the format specification above.</p>

Element	Details
	<p>Business Validations for the Instruction Identification include:</p> <ul style="list-style-type: none"> - Embedded date (positions 01-08) must be within 1 calendar day of the system date; - Embedded Participant ID (positions 09-19) must be owned by the Instructing Agent. <p>Reason Code(s): Reject with Message Status Report (pacs.002) if:</p> <ul style="list-style-type: none"> - Instruction ID matches a previously completed transaction (DUPL); - Embedded Date is not within 1 calendar day of the system date (DT04); - Participant ID is not owned by the Instructing Agent (DS0H). <p>If structural validation fails, the RTP Network will reject with code '650' in Administration Advice message (admi.002).</p> <p>Example: 2017111202120020101BSTRF00000000011</p>
<p>INDEX: 2.3</p> <p>FIToFICstmrCdtTrf +CdtTrfTxInf ++PmtId +++EndToEndId</p>	<p>Name: End To End Identification</p> <p>ISO Description: Unique identification, as assigned by the initiating party, to unambiguously identify the transaction. This identification is passed on, unchanged, throughout the entire end-to-end chain.</p> <p>Usage: The end-to-end identification can be used for reconciliation or to link tasks relating to the transaction. It can be included in several messages related to the transaction.</p> <p>Usage: In case there are technical limitations to pass on multiple references, the end-to-end identification must be passed on throughout the entire end-to-end chain.</p> <p>Product Usage: The identifier assigned by the initiating party (i.e. the person or organisation submitting the payment instruction), to uniquely identify the transaction. This is the customer reference assigned to the transaction. The E2E identification must be passed on throughout the entire payment chain without being changed.</p> <p>XML Tag: <EndToEndId></p> <p>Occurrence: [1..1]</p> <p>Length: 35</p> <p>Note(s): The end-to-end identification can be used by the end users for reconciliation or to link tasks relating to the transaction. It can be included in several messages related to the transaction. If the user does not provide a reference number for a payment, TCH recommends the use of 'NOREF' within the End To End ID field.</p> <p>Example: E2E-Ref001</p>
<p>INDEX: 2.4</p> <p>FIToFICstmrCdtTrf +CdtTrfTxInf ++PmtId +++TxId</p>	<p>Name: Transaction Identification</p> <p>ISO Description: Unique identification, as assigned by the first instructing agent, to unambiguously identify the transaction that is passed on, unchanged, throughout the entire interbank chain.</p> <p>Usage: The transaction identification can be used for reconciliation, tracking or to link tasks relating to the transaction on the interbank level.</p>

Element	Details
	<p>Usage: The instructing agent has to make sure that the transaction identification is unique for a pre-agreed period.</p> <p>Product Usage: Within RTP, Transaction Identification is used to reference the first message within a transaction event. This is either a Request for Payment (pain.013) or the Credit Transfer (pacs.008) itself. When a Credit Transfer is the result of a previously submitted Request for Payment (pain.013) message, Transaction Identification must carry the Payment Information Identification from the original pain.013. When a Credit Transfer is the first message within a transaction event, the Transaction Identification should be equal to the Instruction Identification of the same message (see field Instruction Identification above).</p> <p>XML Tag: <TxId></p> <p>Occurrence: [1..1]</p> <p>Format: YYYYMMDDbbbbbbbbbbBAAAAnnnnnnnnnn This field is a reference field only, and it should reflect the format of the field that is being referenced.</p> <p>Length: 35</p> <p>Note(s): A Credit Transfer (pacs.008) in response to a Request for Return of Funds (camt.056) is considered a new instruction, thus the Transaction ID must equal the Instruction ID. The Instruction ID of the original Credit Transfer (pacs.008) that is being returned is provided under the element Remittance Information / Structured / Referred Document Information.</p> <p>Example: 201711202120020101BSRFP00000000013</p>
<p>INDEX: 2.5</p> <p>FIToFICstmrCdtTrf +CdtTrfTxInf ++PmtId +++UETR</p>	<p>Name: UETR</p> <p>ISO Description: Universally unique identifier to provide an end-to-end reference of a payment transaction.</p> <p>Product Usage: The UETR identifier is assigned by the instructing agent to link an RTP message to services or arrangements outside of the RTP network. If used, the same UETR should be passed on throughout the entire payment chain without being changed. The ability to include a UETR identifier in an RTP message does not mean that RTP messages can be used as part of a larger end-to-end transfer or as a cover payment. Readers should refer to the RTP Operating Rules to determine permissible uses of RTP messages.</p> <p>XML Tag: <UETR></p> <p>Occurrence: [0..1]</p> <p>Length: 36</p> <p>RegEx: [a-f0-9]{8}-[a-f0-9]{4}-4[a-f0-9]{3}-[89ab][a-f0-9]{3}-[a-f0-9]{12}</p> <p>Example: eb6305c9-1f7f-49de-aed0-16487c27b42d</p>
<p>INDEX: 2.6</p> <p>FIToFICstmrCdtTrf +CdtTrfTxInf ++PmtId +++ClrSysRef</p>	<p>Name: Clearing System Reference</p> <p>ISO Description: Unique reference, as assigned by a clearing system, to unambiguously identify the instruction.</p> <p>Product Usage: Identification of the Reconciliation Window within which this transaction is processed. The identification is supplied by RTP and must not be submitted by the Debtor FI.</p> <p>XML Tag: <ClrSysRef></p> <p>Occurrence: [0..1]</p>

Element	Details
	<p>Length: 35</p> <p>Rule(s): Only present in messages sent by RTP to the Creditor FI.</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if XML parsing error occurs.</p> <p>Example: 1</p>
<p>INDEX: 2.7 FIToFICstmrCdtTrf +CdtTrfTxInf ++PmtTpInf</p>	<p>Name: Payment Type Information</p> <p>ISO Description: Set of elements used to further specify the type of transaction.</p> <p>XML Tag: <PmtTpInf></p> <p>Occurrence: [1..1]</p>
<p>INDEX: 2.10 FIToFICstmrCdtTrf +CdtTrfTxInf ++PmtTpInf +++SvcLvl</p>	<p>Name: Service Level</p> <p>ISO Description: Agreement under which or rules under which the transaction should be processed.</p> <p>XML Tag: <SvcLvl></p> <p>Occurrence: [1..1]</p>
<p>INDEX: 2.11 FIToFICstmrCdtTrf +CdtTrfTxInf ++PmtTpInf +++SvcLvl ++++Cd</p>	<p>Name: Code</p> <p>ISO Description: Specifies a pre-agreed service or level of service between the parties, as published in an external service level code list.</p> <p>Product Usage: The Service level of the transaction. 'SDVA' means Credit Transfer must be executed with same day value to the creditor (for RTP this will be done in seconds).</p> <p>XML Tag: <Cd></p> <p>Occurrence: [1..1]</p> <p>Length: 4</p> <p>Rule(s): Expected value of 'SDVA'</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if Service Level Code is not valid.</p> <p>Note(s): This is a mandatory ISO field required for the message type, but not used by RTP.</p> <p>Example: SDVA</p> <p>Permitted Codes</p> <p>SDVA SameDayValue - Payment must be executed with same day value to the creditor.</p>

7.1.4 Referred Document Amount Usage in RTP Credit Transfers

The RTP Credit Transfer (pacs.008) message allows for up to three amounts to be present in the message. The amount that is being paid is always included as the Interbank Settlement Amount (which is always equal to the Total Interbank Settlement Amount). Two occurrences of Referred Document Amount are permitted to include additional information about the payment.

In commercial use cases, when the RTP Credit Transfer is being used to pay a specific invoice or multiple invoices, and a discount is taken from the gross amount of the invoices, two occurrences of Referred Document Amount should be used: one with the Type DSCT and one with the Type FULL. In these use cases, FULL is used to include the gross amount of the invoice(s) being paid. DSCT is used to include the sum of all discounts taken, and should always be the difference between the “FULL” amount and the “Interbank Settlement Amount”. See example below.

Company A is paying Company B \$11,000 for Invoices X, Y, and Z, which have a gross amount of \$11,600.

- Invoice X has a gross amount of \$5,000 and is eligible for a \$100 discount due to trading terms.
- Invoice Y has a gross amount of \$4,100 and is not eligible for any discount.
- Invoice Z has a gross amount of \$2,500 and is not eligible for any discount. However, Company A claims \$500 of breakage due to damaged goods received.

In the RTP Credit Transfer, Company A includes the following amounts:

- Interbank Settlement Amount (equal to Total Interbank Settlement Amount) = \$11,000
- Referred Document Amount, Type FULL = \$11,600
- Referred Document Amount, Type DSCT = \$600

Optionally, Company A provides detailed information about the discount taken on each invoice in a Remittance Advice (remt.001) message.

In consumer use cases, no amounts other than the Interbank Settlement Amount are expected to be used. RTP Customer Display Guidelines will only require the display of the Interbank Settlement Amount in consumer channels.

Finally, the Referred Document Amount Type “ORIG” should only be used to include the original amount of a Credit Transfer that is being returned, if the amount being returned is different from the amount of the Original Credit Transfer.

7.1.5 INTERBANK SETTLEMENT DATE IN CREDIT TRANSFER MESSAGES

ISO 20022 requires the presence of an Interbank Settlement Date within all pacs.008 (Credit Transfer) messages. TCH defines the usage of this element within RTP Credit Transfer messages as follows:

- “Date of the Reconciliation Window within which this transaction is processed and settled. If a message starts being processed at the end of a Reconciliation Window and during processing crosses into another Reconciliation Window, the date of the Reconciliation Window during which the process started will be used.”

Because the ISO standard requires this field to be present in all pacs.008 messages, when a Debtor FI submits a Credit Transfer message to RTP, the Debtor FI should include the current date in this field. When RTP receives the inbound pacs.008 request message from the Debtor FI, the system will overwrite the Interbank Settlement Date and Clearing System Reference fields with the information for the system’s current Reconciliation Window to which the transaction will be assigned and reported. This date will correspond to the calendar day on which the current Reconciliation Window is scheduled to end.

The overwritten value for Interbank Settlement Date and Clearing System Reference will be populated in the RTP-outbound pacs.008 message to the Creditor FI and the RTP-outbound pacs.002 response messages to the Debtor FI and Creditor FI, as applicable, so that all parties are aware of the Reconciliation Window in which the transaction will be reported.

Given that within RTP, each transaction is settled individually in real-time when the system receives a positive pacs.002 from the Creditor FI, participants should not depend on the Interbank Settlement Date as a date on which the transaction settled or posted to an account, as this date may actually be different than the calendar day on which the transaction completes.

For example, if RTP has a scheduled Reconciliation Window for each calendar day at 23:00:00, any transaction received between the start of the reconciliation window (23:00:00 on Day 0) and the end of the Reconciliation Window (22:59:59 on Day 1), will include an Interbank Settlement Date with a value reflecting Day 1. Therefore, any transaction received on Day 0 between 23:00:00 and 23:59:59 will have an Interbank Settlement Date for the following calendar day (Day 1).

8 MESSAGE STRUCTURE SPECIFICATION MESSAGE STATUS REPORT

8.1 Message Status Report – pacs.002.001.10

This chapter defines the standard product message formats used by the TCH Real Time Payment system (RTP) for sending and receiving Message Status Reports, between the RTP and Participants using the System.

This covers the following:

- The message structure of the pacs.002 message used in RTP
- The required data types and usage rules of the data fields in these messages

8.1.1 Scope

The “FI To FI Payment Status Report” message is used for different functions in RTP.

- Message Status Report of Credit Transfer (pacs.008) and FI to FI Credit Transfer (pacs.009)
- Message Status Report to all Payment-related Messages

Usage of Message Status Report as Response to Credit Transfer and FI to FI Credit Transfer

The Message Status Report sent in response to a Credit Transfer Message and FI to FI Credit Transfer Message provides information about the outcome of the transaction (i.e. Accepted, Accepted w/o Posting, or Rejected). After RTP forwards on the Credit Transfer or FI to FI Credit Transfer to the Creditor FI, the Creditor FI should respond with a Message Status Report (pacs.002) prior to expiry of the time-out period. Upon receipt of the Message Status Report from the Creditor FI, RTP will forward the Message Status Report (pacs.002) to update the Debtor FI on the status of the transaction. If the original Credit Transfer or FI to FI Credit Transfer fails business validation or times out (response not received from Creditor FI prior to expiry of the time-out period), RTP will initiate a Message Status Report back to the Debtor FI notifying them of the outcome of the transaction (RJCT) and the reason for the reject.

Upon receipt of a positive Message Status Report (including status ACTC or ACWP) from the Creditor FI, RTP sends a Message Status Report (pacs.002) to the Creditor FI to notify them that the system has completed processing the transaction and that the funds can be released to the customer or FI.

Usage of Message Status Report for Payment-related Message

The Message Status Report (pacs.002) is used to provide a real time response to all Payment-related messages. The pacs.002 will confirm that the message has been received and whether or

not it passed business validation. As such, the Message Status Report is effectively a “technical” response. Where a Payment-related message has been accepted by the receiving party, a subsequent “business” response may also be required in order to fulfil the request contained within the message, or to advise that the request is being declined.

The full list of Payment-related Messages is as follows:

Message Description	ISO Schema
Message Status Report	pacs.002.001.10
Request for Payment	pain.013.001.07
Response to Request for Payment	pain.014.001.07
System Time-out Message & Request for Return of Funds	camt.056.001.08
Response to Request for Return of Funds	camt.029.001.09
Stand-alone Remittance Advice	remt.001.001.04
Request for Information	camt.026.001.07
Response to Request for Information	camt.028.001.09
Payment Acknowledgement	camt.035.001.05
Message Status Request	pacs.028.001.03
Token Identification	acmt.022.001.02

Message Status Report Data Source

The following table specifies the fields present in an original request message that must be mapped to fields in the Message Status Report (pacs.002).

Message	Message Status Report (pacs.002) fields									
	Original Message Identification	Original Message Name	Original Creation Date Time	Original Number of Transaction	Original Instruction Identification	Original Transaction Identification	Instructing Agent ⁴ (field Member Identification or Identification) ⁵	Instructed Agent ⁶ (field Member Identification or Identification)	Interbank Settlement Amount	Interbank Settlement Date

8.1.3 Detail Message Field Description

Note:

To identify which business purpose the pacs.002 message is being used to support, two different product usages are provided:

- Product Usage – Credit Transfer to describe functionality relating to Message Status Report of Credit Transfer (pacs.008) and FI to FI Credit Transfer
- Product Usage – Payment Related Messages to describe functionality relating to all other Messages using the Message Status Report.

Element	Details
FIToFIPmtStsRpt	<p>Name: FITo FIPayment Status Report V10</p> <p>Product Usage: The FIToFIPaymentStatus Report message (Status Report) is used to provide information about the status (i.e. accept, pend or reject) of a Credit Transfer instruction . RTP will use the Status Report message to update the Debtor FI on the transaction status of an original credit transfer. This Status Report message can be either initiated by the Creditor FI (RTP acts as intermediary) or RTP (RTP reject).</p> <p>Refer to the Credit Transfer request message (pacs.008) to provide the basis for the 'Original' data elements.</p> <p>XML Tag: <FIToFIPmtStsRpt></p> <p>Occurrence: [1..1]</p>
INDEX: 1.0 FIToFIPmtStsRpt +GrpHdr	<p>Name: Group Header</p> <p>ISO Description: Set of characteristics shared by all individual transactions included in the status report message.</p> <p>XML Tag: <GrpHdr></p> <p>Occurrence: [1..1]</p>
INDEX: 1.1 FIToFIPmtStsRpt +GrpHdr ++MsgId	<p>Name: Message Identification</p> <p>ISO Description: Point to point reference, as assigned by the instructing party, and sent to the next party in the chain to unambiguously identify the message. Usage: The instructing party has to make sure that MessageIdentification is unique per instructed party for a pre-agreed period.</p> <p>Product Usage: Assigned by the Instructing Agent (Creditor FI or RTP). The Instructing Agent (or the System if originated by RTP in a system reject scenario) must ensure the uniqueness of this Message Identification.</p> <p>XML Tag: <MsgId></p> <p>Occurrence: [1..1]</p> <p>Format: MYYYYMMDDbbbbbbbbbbBAAAnnnnnnnnnn Pos. 01-01 - Prefix 'M' Pos. 02-09 - File creation date in format YYYYMMDD Pos. 10-20 - Participant ID (11 characters) Pos. 21-21 - Message generation source ("B" if generated by a Participant; 'H' if generated by RTP) Pos. 22-24 - Discretionary bank field (3 digit alpha numeric that can be used to serialize, identify specific systems, etc.) Pos. 25-35 - Message serial number (11 numeric characters)</p> <p>RegEx: M[0-9]{4}(((01 03 05 07 08 10 12)((0[1-9]) ([1-2][0-9]) (3[0-1]))) ((04 06 09 11)((0[1-9]) ([1-2][0-9]) 30)) ((02)((0[1-9]) ([1-2][0-9])))))[A-Z0-9]{11}.*</p> <p>Length: 35</p> <p>Rule(s): The first 20 characters of the Message ID (positions 01-20) are validated for structural alignment according to the format specification.</p>

Element	Details
	<p>Reason Code(s): In case of structural failure the RTP Network will reject with code '650' in Administration Advice message (admi.002).</p> <p>Note(s): Where RTP is the intermediary, the Message Identification in the message received by the System from the Instructing Agent (Creditor FI) is passed untouched by the System to the Instructed Agent (Debtor FI). Where RTP is generating the pacs.002 message the Message Identification is generated by the system (identified with 'H' on the 19th position). Note the message identification for the original request message (the Payment or Payment Related Message) is different than the message identification for the corresponding pacs.002 (Message Status Report) message.</p> <p>Example: M2017111202001000101BMSR00000000002</p>

9 MESSAGE STRUCTURE SPECIFICATION REQUEST FOR PAYMENT

9.1 Request for Payment – pain.013.001.07

This chapter defines the standard product message formats used within RTP for sending and receiving the Request for Payment message; between RTP and Participants using the system.

This chapter covers the following:

- The message structure of the pain.013
- The required data types and usage rules of the data fields in this messages

9.1.1 Scope

The Request for Payment (RFP) message (pain.013) is sent by the Creditor (sending party) to the Debtor (receiving party) through their respective FIs. This message is used to request the initiation of a payment from the party that receives the pain.013 message. The Debtor may choose to send a responsive payment as a Credit Transfer through the RTP network or through another means of payment.

Note: as the RFP is initiated by the Creditor, it does not follow a traditional Credit Transfer (pacs.008) message flow where the Debtor is the sending party and the Creditor is the receiving party.

If a Debtor FI has a message persona that supports receipt of RFPs, upon receipt of a pain.013 message, the Debtor FI must respond with a Message Status Report (pacs.002) confirming whether the request can be processed without issue (RCVD) or if an error occurred during processing (RJCT). If the Debtor FI responds positively to the RFP, it must present the RFP to the Debtor, allowing the Debtor to later send a business response (e.g. make a payment, schedule a payment, reject the request, or allow the request to expire). If the Debtor later schedules a payment or rejects the request, the Debtor FI must send a Response to Request for Payment message, notifying the Creditor of the outcome of the request.

9.1.3 Detail Message Field Description

Element	Details
CdtrPmtActvtnReq	<p>Name: Creditor Payment Activation Request V07</p> <p>ISO Description: The CreditorPaymentActivationRequest message is sent by the Creditor sending party to the Debtor receiving party, directly or through agents. It is used by a Creditor to request movement of funds from the debtor account to a creditor.</p> <p>XML Tag: <CdtrPmtActvtnReq></p> <p>Occurrence: [1..1]</p>
INDEX: 1.0 CdtrPmtActvtnReq +GrpHdr	<p>Name: Group Header</p> <p>ISO Description: Set of characteristics shared by all individual transactions included in the message.</p> <p>XML Tag: <GrpHdr></p> <p>Occurrence: [1..1]</p>
INDEX: 1.1 CdtrPmtActvtnReq +GrpHdr ++MsgId	<p>Name: Message Identification</p> <p>ISO Description: Point to point reference assigned by the instructing party and sent to the next party in the chain to unambiguously identify the message.</p> <p>Usage: The instructing party has to make sure that 'MessageIdentification' is unique per instructed party for a pre-agreed period.</p> <p>Product Usage: Assigned by the Instructing Agent (Creditor FI). The Instructing Agent (Creditor FI) must ensure the uniqueness of this message identification.</p> <p>XML Tag: <MsgId></p> <p>Occurrence: [1..1]</p> <p>Format: Format: MYYYYMMDDbbbbbbbbbbBAAAnnnnnnnnnnn Pos. 01-01 - Prefix 'M' Pos. 02-09 - File creation date in format YYYYYMMDD Pos. 10-20 - Participant ID (11 characters) Pos. 21-21 - Message generation source ("B" if generated by a Participant) Pos. 22-24 - Discretionary bank field (3 digit alpha numeric that can be used to serialize, identify specific systems, etc.) Pos. 25-35 - Message serial number (11 numeric characters)</p> <p>RegEx: M[0-9]{4}(((01 03 05 07 08 10 12)((0[1-9]) ([1-2][0-9]) (3[0-1]))) ((04 06 09 11)((0[1-9]) ([1-2][0-9]) 30)) ((02 0[1-9]) ([1-2][0-9]))))([A-Z0-9]{11}).*</p> <p>Length: 35</p> <p>Rule(s): The first 20 characters of the Message Identification (positions 01-20) are validated for structural alignment in accordance with the format specification.</p> <p>Reason Code(s): In case for structural validation failure, the RTP Network will reject with code '650' in Administration Advice message (admi.002).</p>

Element	Details
	<p>Note(s): The Message Identifier in the message received by the System from the Instructing Agent (Creditor FI) is passed untouched by RTP to the Instructed Agent (Debtor FI). Note: the message identification for a Request for Payment (pain.013) is different than the message identification for the corresponding Credit Transfer (pacs.008).</p> <p>Example: M2017111202120020101BRFP00000000013</p>
<p>INDEX: 1.2 CdtrPmtActvtnReq +GrpHdr ++CreDtTm</p>	<p>Name: Creation Date Time</p> <p>ISO Description: Date and time at which the message was created.</p> <p>XML Tag: <CreDtTm></p> <p>Occurrence: [1..1]</p> <p>Format: YYYY-MM-DDThh:mm:ss</p> <p>Length: 19</p> <p>Rule(s): Creation Date Time must be within 1 calendar day of the system's date/time.</p> <p>Reason Code(s): Reject with code 'DT04' in pacs.002 for failing validation.</p> <p>Note(s): The date is required to be set to Eastern Time (ET).</p> <p>Example: 2017-11-12T10:05:00</p>
<p>INDEX: 1.3 CdtrPmtActvtnReq +GrpHdr ++NbOfTxs</p>	<p>Name: Number Of Transactions</p> <p>ISO Description: Number of individual transactions contained in the message.</p> <p>XML Tag: <NbOfTxs></p> <p>Occurrence: [1..1]</p> <p>RegEx: [1]{1,1}</p> <p>Length: 1</p> <p>Rule(s): Expected value is '1'</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if value is not '1'.</p> <p>Note(s): System only permits one Request for Payment per pain.013 message.</p> <p>Example: 1</p>
<p>INDEX: 1.5 CdtrPmtActvtnReq +GrpHdr ++InitgPty</p>	<p>Name: Initiating Party</p> <p>ISO Description: Party initiating the creditor payment activation request. This can either be the creditor himself or the party that initiates the request on behalf of the creditor.</p> <p>Product Usage: Used to provide Message Sender identifications for a specific scheme(i.e: Zelle) or for a specific use case. Refer to implementation documentation for more detail.</p> <p>XML Tag: <InitgPty></p>

Element	Details
INDEX: 1.29 CdtrPmtActvtnReq +GrpHdr ++InitgPty +++Id	<p>Occurrence: [1..1]</p> <p>Name: Identification</p> <p>ISO Description: Unique and unambiguous identification of a party.</p> <p>Product Usage: This element is used on a conditional basis for Identification of any other specific identifier of the ultimate receiver.</p> <p>XML Tag: <Id></p> <p>Occurrence: [1..1]</p>
INDEX: 1.30 CdtrPmtActvtnReq +GrpHdr ++InitgPty +++Id ++++OrgId	<p>Name: Organisation Identification</p> <p>ISO Description: Unique and unambiguous way to identify an organisation.</p> <p>XML Tag: <OrgId></p> <p>Occurrence: [1..1]</p>

<p>INDEX: 2.0</p> <p>CdtrPmtActvtnReq +PmtInf</p>	<p>Name: Payment Information</p> <p>ISO Description: Set of characteristics that applies to the debit side of the payment transactions included in the creditor payment initiation.</p> <p>XML Tag: <PmtInf></p> <p>Occurrence: [1..1]</p>
<p>INDEX: 2.1</p>	<p>Name: Payment Information Identification</p>

Element	Details
CdtrPmtActvtnReq +PmtInf ++PmtInfId	<p>ISO Description: Reference assigned by a sending party to unambiguously identify the payment information block within the message.</p> <p>Product Usage: The Payment Information Identifier is assigned by the Instructing Agent (Creditor FI) to uniquely identify a payment instruction throughout its existence within RTP. The Payment Information ID is the unique identifier that is persisted in the transactional database as the primary means of subsequent reference for the Request for Payment instruction.</p> <p>The uniqueness of an instruction is determined by the Payment Information Identification and is based on the format below. RTP will use the Payment Information ID to perform a check for a duplicate transaction within the duplicate checking period.</p> <p>XML Tag: <PmtInfId></p> <p>Occurrence: [1..1]</p> <p>Format: Expected format: YYYYMMDDbbbbbbbbbbBAAAAAnnnnnnnnnn Pos. 01-08 - File creation date in format YYYYMMDD Pos. 09-19 - Participant ID (11 characters) Pos. 20-20 - Message generation source ("B" if generated by a Participant) Pos. 21-24 - Discretionary bank field (4 digit alpha numeric that can be used to serialize, identify specific systems, etc.) Pos. 25-35 - Message serial number (11 numeric characters)</p> <p>RegEx: [0-9]{4}(((01 03 05 07 08 10 12)((0[1-9]) ([1-2][0-9]) (3[0-1]))) ((04 06 09 11)((0[1-9]) ([1-2][0-9]) 30)) ((02 ([0[1-9]) ([1-2][0-9])))))[A-Z0-9]{11}.*</p> <p>Length: 35</p> <p>Rule(s): The first 19 characters of the Payment Information Identifications (positions 1-19) are validated for structural alignment in accordance with the format specification. Business validations for the Instruction Identification include: - Embedded date (positions 01-08) must be within 1 calendar day of the system date. - Embedded Participant ID (positions 09-19) must be owned by the Instructing Agent.</p> <p>Reason Code(s): If structural validation fails, The RTP Network will reject with code '650' in Administration Advice message (admi.002). Reject with Message Status Report (pacs.002) if: - Payment Information ID matches a previously completed transaction (DUPL) - Embedded date is not within one calendar day of the system date (DT04) - Participant ID is not owned by the Instructing Agent (DS0H)</p> <p>Note(s): Used for duplicate check and re-association to the resulting Credit Transfer. Must be used in the Transaction Identification (TxId) field in the subsequent Credit Transfer (pacs.008) message.</p> <p>Example: 2017111202120020101BSRFP00000000013</p>
INDEX: 2.2 CdtrPmtActvtnReq +PmtInf	<p>Name: Payment Method</p> <p>ISO Description: Specifies the means of payment that will be used to move the amount of money.</p> <p>XML Tag: <PmtMtd></p>

Element	Details
++PmtMtd	<p>Occurrence: [1..1] Length: 3 Rule(s): Only a value of 'TRF' is allowed. Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if value is not 'TRF' Note(s): This is a mandatory field and only the value TRF is expected. Example: TRF</p>
INDEX: 2.14 CdtrPmtActvtnReq +PmtInf ++ReqdExctnDt	<p style="text-align: center;">Permitted Codes</p> <p style="text-align: center;">TRF CreditTransfer</p> <p>Name: Requested Execution Date</p> <p>ISO Description: Date at which the initiating party requests the clearing agent to process the payment. If payment by cheque, the date when the cheque must be generated by the bank.</p> <p>Usage: This is the date on which the debtor's account(s) is (are) to be debited.</p> <p>Product Usage: Requested date on which the Customer Credit Transfer should be executed. Either Date or Date and Time must be provided. If only Date is provided, the Request for Payment will be expected to be paid by the end of the designated calendar day in Eastern Time. The Debtor FI must display the Requested Execution Date to the Debtor.</p> <p>XML Tag: <ReqdExctnDt></p> <p>Occurrence: [1..1] Note(s): If only Date is provided the time would be signified as 23:59:59 ET.</p>
INDEX: 2.15 Choice: {Or CdtrPmtActvtnReq +PmtInf ++ReqdExctnDt +++Dt	<p>Name: Date</p> <p>ISO Description: Specified date.</p> <p>Product Usage: Requested date by which the Customer Credit Transfer should be executed.</p> <p>XML Tag: <Dt></p> <p>Occurrence: [1..1] Format: YYYY-MM-DD Length: 10 Rule(s): Must be a valid processing date.</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002). Note(s): In a Business/Consumer to Business scenario this could be also the due date of Payment. When this field is used, it is assumed that payment is requested to be made by the end of the indicated calendar day in the local timezone.</p>

9.1.4 Referred Document Amount Usage in RTP Request for Payment Messages

The RTP® Request for Payment (pain.013) message allows for up to three amounts to be present in the message. The amount that is being requested, and which will be displayed as the requested amount to the recipient, should be placed in the Instructed Amount field. Additionally, two occurrences of Referred Document Amount / Discount Applied Amount fields and their respective codes can be used to communicate additional amount information to the message recipient. Usage of these fields and codes are defined in this section. The available amount types include the following:

- DSCT – Discount amount
- FULL – Full amount

In commercial use cases, Discount Amount and Full Amount must be used in conjunction. Discounted amount should be used to show that the Instructed Amount field includes a discount for the indicated amount. The recipient is entitled to this discount at least until the indicated Requested Execution Date or Requested Execution Date Time, whichever is present. If the discount expires with the Requested Execution Date, the sender should send an RFP Expiration message (camt.056) upon the expiration of the discount. Whenever Discount Amount is present, a second occurrence of Referred Document Amount with the Type 'FULL' must also be included.

Full amount should be used to carry the gross amount of the request. In commercial use cases, the Instructed Amount, plus the Discount Amount, will equal the Full Amount.

In consumer use cases, Discount amount should not be used. Full amount should be used to carry the full (or statement) value of the debt/invoice/transaction for which this RFP is being sent.

Commercial use case example:

Company A sends an RFP to Company B for \$11,500 for Invoices X, Y, and Z, which have a gross amount of \$11,600.

- Invoice X has a gross amount of \$5,000 and is eligible for a \$100 discount due to trading terms.
- Invoice Y has a gross amount of \$4,100 and is not eligible for any discount.
- Invoice Z has a gross amount of \$2,500 and is not eligible for any discount.

In the RFP, Company A includes the following amounts:

- Instructed Amount = \$11,500
- Referred Document Amount, Type FULL = \$11,600
- Referred Document Amount, Type DSCT = \$100

Optionally, Company A provides detailed information about each invoice in a Remittance Advice (remt.001) message.

Consumer use case example:

On March 1, Biller A sends an RFP to Consumer for a statement for the previous statement period that has a balance of \$1,500 and a minimum amount due of \$200. The Instructed Amount includes the value \$200 and the 'FULL' amount includes the value \$1,500.

9.2 Response to Request for Payment – pain.014.001.07

9.2.1 Scope

The Response to Request for Payment message is used to provide a business response to a Request for Payment (pain.013) message in two scenarios:

- The Debtor schedules a payment for a future date/time; or
- The Debtor FI renders the Request for Payment unpayable prior to the Expiry Date included in the original request.

If the Debtor has scheduled a payment for a future date/time, the Response to Request for Payment message is sent with the status ACTC, and includes details regarding the conditions of the payment (ie. date/time and amount of the scheduled payment, guaranteed payment indicator).

The Debtor FI may render the Request for Payment unpayable prior to the Expiry Date included in the original request for a number of reasons (e.g. account is closed while RFP is still unpaid, account holder indicates payment will not be made). In this case, the Response to Request for Payment message is sent with the status RJCT with a reason code indicating the reason for the rejection.

In either case, the Creditor FI must respond to the Response to Request for Payment Message with a Message Status Report indicating whether or not the pain.014 was successfully processed.

10 MESSAGE STRUCTURE SPECIFICATION REQUEST FOR RETURN OF FUNDS & SYSTEM TIME-OUT

10.1 Request for Return of Funds – camt.056.001.08

This chapter defines the standard product message formats used by the TCH RTP System for sending and receiving a System Time-out / Request for Return of Funds / Request for Payment Expiration message (camt.056), between RTP and Participants using the System.

This chapter covers the following:

- The message structure of the camt.056 and the camt.029 used in RTP
- The required data types and usage rules of the data fields in these messages

10.1.1 Scope

RTP employs the ISO 20022 Payment Cancellation Request (camt.056) message for three purposes within RTP:

- System Time-Out: notification to the Creditor FI that a Credit Transfer has timed-out
- Request for Return of Funds: initiated by the Debtor FI to (i) request the Creditor FI investigate and return funds for any reason, or (ii) to make a claim under the RFP warranty in the RTP Operating Rules (when used with the UPAY code).
- Request for Payment expiration: initiated by the Creditor FI to facilitate the cancellation of a Request for Payment such that the Debtor can no longer make an RTP payment referencing the expired RFP.

The System Time-Out message is initiated by the System and sent to the Creditor FI that failed to respond to the System prior to expiration of the time-out counter. Upon receipt of a System Time-out message, the Creditor FI must respond with a Message Status Report (pacs.002) confirming receipt of the System Time-out message. Note: for non-pacs.008 messages, When the RTP time-out counter expires for the receiving FI, the original transaction is removed from the blackboard and the transaction is considered complete. System will not send a cancelation message to the Receiver of the original message and will not send a pacs.002 indicating timeout to the Sender of the message. A Request for Return of Funds message is initiated by the original Debtor FI upon notification from the debtor of an erroneous or fraudulently induced payment. The system forwards the message to the original Creditor FI, who must respond with a Message Status Report (pacs.002) confirming receipt of the Request for Return of Funds message.

The business response to the Request for Return of Funds is a Resolution of Investigation (camt.029) message, also referred to as a Response to the Request for Return of Funds. The Resolution of Investigation (camt.029) message may either be a positive response, indicating that

funds will be returned, or negative (rejected), indicating that funds will not be returned. In either case, the response is not expected to be immediate, but after an investigation by the Creditor FI.

If the Creditor FI returns funds either via the Real-time Payment System or another Payment System. In case of RTP it will create a new Credit Transfer message (pacs.008) that includes a reference to the corresponding Request for Return of Funds in the pacs.008.

A Request for Payment Expiration (RFP Expiration) is initiated by the Creditor FI to notify the Debtor FI that the conditions for the original Request for Payment may have changed and that payment should not be made referencing the original Request for Payment. Upon receipt of an RFP Expiration message, the Debtor FI must respond with a Message Status Report (pacs.002) indicating whether or not the RFP Expiration can be applied. If the Message Status Report includes the status RCVD, the Debtor FI must no longer allow the Debtor to create an RTP Credit Transfer that references the original Request for Payment message indicated within the RFP Expiration.

Note: To identify which business purpose the camt.056 message is being used to support, three different product usages are provided:

- **Product Usage – Time-out** to describe functionality relating to a message time-out
- **Product Usage – Return** to describe functionality relating to Request for Return of Funds (pacs.008) message
- **Product Usage – RFP Expiry** to describe functionality relating to Cancellation of Request for Payment (pain.013) message

11 MESSAGE STRUCTURE SPECIFICATION REQUEST FOR INFORMATION

11.1 Request for Information – camt.026.001.07

This chapter defines the standard product message formats used by the RTP system for sending and receiving a Request for Information message (camt.026) and the associated Response to Request for Information (camt.028) message, between RTP and Participants using the System.

This chapter covers the following:

- The message structure of the camt.026 and the camt.028 used in RTP
- The required data types and usage rules of the data fields in these messages

11.1.1 Scope

The Request for Information (camt.026) message is used to request additional details related to a Credit Transfer (pacs.008) or a Request for Payment (pain.013) that has been received.

The Request for Information (camt.026) is always responded to with a Message Status Report (pacs.002) indicating whether or not the request is able to be displayed to the intended recipient. The Response to Request for Information (camt.028) is used to provide the information requested in the original message.

Information can be requested by an end-user or by an RTP Participant institution. Requests that are sent by end users must always be presented to the other end-user. Requests that are sent by an RTP Participant must be presented to an employee of the other RTP Participant involved in the original message.

		Message Recipient	
		End User	RTP Participant
Message Sender	End User	For Credit Transfer or Request For Payment	Not Permitted
	RTP Participant	Not permitted	For Credit Transfer or Request for Payment

11.2 Response to Request for Information – camt.028.001.09

11.2.1 Scope

The Response to the Request for Information (camt.028) message is sent either:

- by the Debtor to the Creditor (pacs.008),
- by the Creditor to the Debtor (pain.013),
- by the Debtor FI to the Creditor FI (pacs.008), or
- by the Creditor FI to the Debtor FI (pain.013).

The message is used by the sender to provide the requested additional information in the form of an amendment to the original Request for Payment or Credit Transfer using the structured elements, or directly in response to the original request using the unstructured remittance information field available in the camt.028 message.

If multiple codes were included in the original Request for Information message, multiple answers for these different codes may be provided in multiple occurrences of the Unstructured remittance information field by referencing the relevant code starting and ending with '/' followed by the relevant information (e.g. /MS01/).

XML Example with code /MS01/ and /IN01/:

```
<Inf>
  <RmtInf>
    <Ustrd>/MS01/remittance info was provided via email on 18/07/2018</Ustrd>
    <Ustrd>/IN01/4711_12_2018</Ustrd>
  </RmtInf>
</Inf>
```

Note: If the end-user or the Participant cannot provide additional information, a negative Response to Request for Information can be sent by including the value '/RJCT/' in the 'Remittance Information / Unstructured' field.

XML Example with code /RJCT/:

```
<Inf>
  <RmtInf>
    <Ustrd>/RJCT/Information not available</Ustrd>
  </RmtInf>
</Inf>
```

	Permitted Codes
	USD US Dollar

12 MESSAGE STRUCTURE SPECIFICATION PAYMENT ACKNOWLEDGEMENT

12.1 Acknowledgment – camt.035.001.05

This chapter defines the standard product message formats used by the TCH Real Time Payment system (RTP) for sending and receiving Payment Acknowledgement messages, between the RTP and Participants using the System.

This chapter covers the following:

- The message structure of the camt.035 message used in RTP
- The required data types and usage rules of the data fields in these messages

12.1.1 Scope

The Payment Acknowledgement message has two uses:

- A Creditor (end-user) may use the message to acknowledge that a Credit Transfer has been received and applied; and
- A Creditor FI (RTP Participant) must use the message to confirm that the funds associated with a Credit Transfer, that was previously accepted without posting (ACWP transaction status), has posted to the Creditor's account.

12.1.2 Message Structure Description

Index	XML Tag	Element Name	Occurr.	Length	M/O/C

INDEX: 3.9 PrtryFrmtInvstgtn +PrtryData ++Data +++OrigRefs ++++UETR	<p>Name: UETR</p> <p>ISO Description: Universally unique identifier to provide an end-to-end reference of a payment transaction.</p> <p>Product Usage: The UETR identifier is assigned by the instructing agent to link an RTP message to services or arrangements outside of the RTP network. If used, the same UETR should be passed on throughout the entire payment chain without being changed. The ability to include a UETR identifier in an RTP message does not mean that RTP messages can be used as part of a larger end-to-end transfer or as a cover payment. Readers should refer to the RTP Operating Rules to determine permissible uses of RTP messages.</p> <p>XML Tag: <UETR></p> <p>Occurrence: [0..1]</p> <p>Length: 36</p> <p>RegEx: [a-f0-9]{8}-[a-f0-9]{4}-4[a-f0-9]{3}-[89ab][a-f0-9]{3}-[a-f0-9]{12}</p> <p>Example: eb6305c9-1f7f-49de-aed0-16487c27b42d</p>

13 MESSAGE STRUCTURE SPECIFICATION PAYMENT STATUS REQUEST

13.1 Payment Status Request –pacs.028.001.03

This chapter defines the standard product message formats used by the TCH Real Time Payment system (RTP) for sending a Payment Status Request message to retrieve the status of a previously completed Credit Transfer. This chapter covers the following:

- The message structure of the pacs.028 message used in RTP
- The required data types and usage rules of the data fields in these messages

13.1.1 Scope

The Participant can request a status about a previously submitted Credit Transfer (pacs.008), FI to FI Credit Transfer (pacs.009) or Request for Payment (pain.013) in case the pacs.002 was not received.

In a typical Credit Transfer flow, the Debtor FI will receive a Message Status Report (pacs.002) including the outcome of the Credit Transfer (pacs.008) request. However, if a processing error causes the Debtor FI to miss or fail to receive the Message Status Report, the Payment Status Request (pacs.028) can be used to return a copy of the original Message Status Report.

Additionally, in a typical Credit Transfer flow, the Creditor FI receives a Message Status Report (pacs.002) confirming that the system received its response to the Credit Transfer and that the transaction has settled. If the Creditor FI's response is not received in time, the system generates a System Time-Out message (camt.056), notifying the Creditor FI of the time-out condition. However, if the Creditor FI does not receive either of these messages, the Creditor FI may submit a Payment Status Request (pacs.028) to retrieve a copy of the original Message Status Report.

In the case in which a Creditor FI is submitting a Payment Status Request (pacs.028) related to a Credit Transfer that timed out, the System will return a copy of the Message Status Report (pacs.002) with status set to RJCT and Reason Code DS24.

In the case in which the original credit transfer is not found, the system will respond with a Message Status Report (pacs.002) rejecting the Payment Status Request (pacs.028). See the Message Status Report Section for more information related to the references included in the pacs.002 when the pacs.028 is being rejected compared to when the pacs.002 response is a copy of the response from the original Credit Transfer.

Notes:

- In the Business Application Header of the Message Status Report response, the code 'COPY' is used if the response is a copy of the original response.

- A pacs.002 copy will have a different MsgId and CreDtTm (elements of the Group Header set). The MsgID and CreDtTm will match the pacs.028 while other fields will match the original message.
- Assorted reasons can cause the pacs.028 to fail. In this case the system will respond with a new pacs.002 rejection with the appropriate reason code:

	<p>(admi.002) if:</p> <ul style="list-style-type: none"> - The value of this field is zero or less than zero - The value in this field is greater than supported by the ISO definition for the maximum number of digits (total 18 digit) - The currency code is not valid - The number of decimal digits is greater than the specified number of digits as defined by the ISO4217 definition <p>Note(s): RTP is only supporting USD and the maximum decimal digits allowed are two.</p> <p>Example: 525.25</p> <p>Frac Digits: 2</p> <p>Total Digits: 18</p>
<p>INDEX: 3.142</p>	<p>Name: Currency</p> <p>ISO Description: A code allocated to a currency by a Maintenance Agency under an international identification scheme, as described in the latest edition of the international standard ISO 4217 "Codes for the representation of currencies and funds".</p> <p>XML Tag: <Ccy></p> <p>RegEx: [A-Z]{3,3}</p> <p>Length: 3</p> <p>Rule(s): The Currency Code must be registered, or have already been registered. Valid active or historic currency codes are registered with the ISO 4217 Maintenance Agency, consist of three (3) contiguous letters, and may be or not be withdrawn on the day the message containing the Currency is exchanged.</p> <p>Example: USD</p> <p>Permitted Codes</p> <p>USD US Dollar</p>
<p>INDEX: 3.150</p> <p>FIToFIPmtStsReq +TxInf ++OrgnlTxRef +++IntrBkSttlmDt</p>	<p>Name: Interbank Settlement Date</p> <p>ISO Description: Date on which the amount of money ceases to be available to the agent that owes it and when the amount of money becomes available to the agent to which it is due.</p> <p>Product Usage: Interbank settlement date of the message. If unknown, include the date as the current calendar day.</p> <p>XML Tag: <IntrBkSttlmDt></p> <p>Occurrence: [1..1]</p> <p>Format: YYYY-MM-DD</p> <p>Length: 10</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if XML parsing error.</p> <p>Example: 2017-11-12</p>

14 MESSAGE STRUCTURE SPECIFICATION TOKEN NOTIFICATION MESSAGE

Note that the acmt.022.001.02 message type is reserved for future use.

14.1 Token Notification – acmt.022.001.02

This chapter defines the standard product message formats used by the TCH Real Time Payment system (RTP) for receiving the Token Advice message, sent by RTP to Participants using the RTP System.

This chapter covers the following:

- The message structure of the acmt.022 message used in RTP
- The required data types and usage rules of the data fields in these messages

14.1.1 Scope

This message is used to send a tokenized Routing and Transit number and account number back to the sender of a Credit Transfer or a Request for Payment when the sender of the pacs.008 or pain.013 used account credentials in the clear and a token exists in the token service for the recipient account.

Secure Token Exchange (STE) is a stand-alone token service offered by The Clearing House. Participants in RTP can take advantage of STE in a number of ways. In this use case, an RTP Participant is a customer of STE and has instructed STE to notify any sender of an RFP or Credit Transfer using account credentials in the clear that a token exists for the account. The Token Notification message includes a reference to the original message (Credit Transfer or Request for Payment), the original account credentials used, and the tokenized credentials that should be used in the future.

Upon receipt of the Token Notification Message, the recipient should replace any stored account credentials with the token information provided.

15 MESSAGE STRUCTURE SPECIFICATION FI TO FI CREDIT TRANSFER

Note that the pacs.009.001.08 message type is reserved for future use.

15.1 Credit Transfer Message – pacs.009.001.08

This chapter defines the standard product message formats used by the TCH Real Time Payment system (RTP) for sending and receiving Financial Institution to Financial Institution Credit Transfer messages, between the RTP and Participants using the System.

This chapter covers the following:

- The message structure of the pacs.009 message used in RTP
- The required data types and usage rules of the data fields in these messages

15.1.1 Scope

An Instructing Agent will use the “FI To FI Customer Credit Transfer Message” to initiate a FI to FI Credit Transfer. This message is sent by a Debtor FI to a Creditor FI through RTP.

It should be noted that in circumstances when the Debtor FI needs to send a Repeat Credit Transfer Request (i.e. the Debtor FI does not receive a response to their original pacs.009 message from the System and sends a repeat message to RTP), the message payload is identical to the original pacs.009 message but the Copy Duplicate <CpyDplct> data element is added with a value of “DUPL” in the Business Application Header.

Response to the FI to FI Credit Transfer (pacs.009) is provided via the Message Status Report (pacs.002). Response can either be Accepted or Rejected.

INDEX: 2.0 FICdtTrf +CdtTrfTxInf	Name: Credit Transfer Transaction Information ISO Description: Set of elements providing information specific to the individual credit transfer(s). XML Tag: <CdtTrfTxInf> Occurrence: [1..1]
INDEX: 2.1 FICdtTrf +CdtTrfTxInf ++PmtId	Name: Payment Identification ISO Description: Set of elements used to reference a payment instruction. XML Tag: <PmtId> Occurrence: [1..1]
INDEX: 2.2 FICdtTrf	Name: Instruction Identification

Element	Details
+CdtTrfTxInf ++PmtId +++InstrId	<p>ISO Description: Unique identification, as assigned by an instructing party for an instructed party, to unambiguously identify the instruction.</p> <p>Usage: The instruction identification is a point to point reference that can be used between the instructing party and the instructed party to refer to the individual instruction. It can be included in several messages related to the instruction.</p> <p>Product Usage: The Instruction Identifier is assigned by the Debtor FI to uniquely identify a single FI Credit Transfer within a pacs.009 throughout its existence within RTP. The Instruction ID is the unique identifier that is persisted in the transactional database as the primary means of subsequent reference for the Credit Transfer (i.e. for System Enquiries). The uniqueness of an instruction is determined by the Instruction Identification and is based on the format below. RTP will use the Instruction ID to perform a check for a duplicate transaction within the duplicate checking period and as a reference to the payment instruction in other non-payment messages (i.e. Payment Acknowledgment by Receiver, Request for Information, etc.).</p> <p>XML Tag: <InstrId></p> <p>Occurrence: [1..1]</p> <p>Format: Expected format: YYYYMMDDbbbbbbbbbbBAAAAnnnnnnnnnnn Pos. 01-08 - File creation date in format YYYYMMDD Pos. 09-19 - Participant ID (11 characters) Pos. 20-20 - Message generation source ("B" if generated by a Participant) Pos. 21-24 - Discretionary bank field (4 digit alpha numeric that can be used to serialize, identify specific systems, etc.) Pos. 25-35 - Message serial number (11 numeric characters)</p> <p>RegEx: [0-9]{4}(((01 03 05 07 08 10 12)((0[1-9]) ([1-2][0-9]) (3[0-1]))) ((04 06 09 11)((0[1-9]) ([1-2][0-9]) 30)) ((02)((0[1-9]) ([1-2][0-9])))))[A-Z0-9]{11}.*</p> <p>Length: 35</p> <p>Rule(s): The Instruction Identification structure position 01 to 20 is validated for structural alignment according to the format specification.</p> <p>The Creation Date provided in the Instruction Identification must be in the date range +/- one day.</p> <p>The Participant ID provided in the Instruction Identification must be owned by the sender of the message.</p> <p>The Instruction Identification must be unique for a calendar day and is used to perform the duplicate message check.</p> <p>Reason Code(s): In case for structural validation failure, the RTP Network will reject with code '650' in Administration Advice message (admi.002).</p>

Element	Details
	<p>Reject with Message Status Report (pacs.002) if validation</p> <ul style="list-style-type: none"> - of Creation Date fails (reason code 'DT04') - of Participation ownership fails (reason code 'DS0H') - against duplication check occur (reason code 'DUPL') <p>Note(s): This format is partial validated by the system, it is an example format only</p> <p>Example: 2017111202120020101BSTRF00000000011</p>
<p>INDEX: 2.3</p> <p>FICdtTrf +CdtTrfTxInf ++PmtId +++EndToEndId</p>	<p>Name: End To End Identification</p> <p>ISO Description: Unique identification, as assigned by the initiating party, to unambiguously identify the transaction. This identification is passed on, unchanged, throughout the entire end-to-end chain.</p> <p>Usage: The end-to-end identification can be used for reconciliation or to link tasks relating to the transaction. It can be included in several messages related to the transaction.</p> <p>Usage: In case there are technical limitations to pass on multiple references, the end-to-end identification must be passed on throughout the entire end-to-end chain.</p> <p>Product Usage: The identifier assigned by the initiating party (i.e. Debtor FI), to uniquely identify the transaction. This is the Debtor FI's reference assigned to the transaction. The E2E identification must be passed on throughout the entire payment chain without being changed.</p> <p>XML Tag: <EndToEndId></p> <p>Occurrence: [1..1]</p> <p>Length: 35</p> <p>Note(s): The end-to-end identification can be used by the end users for reconciliation or to link tasks relating to the transaction. It can be included in several messages related to the transaction.</p> <p>Example: E2E-Ref001</p>
<p>INDEX: 2.4</p> <p>FICdtTrf +CdtTrfTxInf ++PmtId +++TxId</p>	<p>Name: Transaction Identification</p> <p>ISO Description: Unique identification, as assigned by the first instructing agent, to unambiguously identify the transaction that is passed on, unchanged, throughout the entire interbank chain.</p> <p>Usage: The transaction identification can be used for reconciliation, tracking or to link tasks relating to the transaction on the interbank level.</p> <p>Usage: The instructing agent has to make sure that the transaction identification is unique for a pre-agreed period.</p> <p>Product Usage: The unique identifier, assigned by the first instructing agent to unambiguously identify the transaction that is passed on unchanged throughout the entire interbank chain.</p> <p>It must be equal to the Instruction ID.</p>

Element	Details
	<p>XML Tag: <TxId></p> <p>Occurrence: [1..1]</p> <p>Format: equal to Instruction Identification</p> <p>Length: 35</p> <p>Note(s): This is a mandatory field based on the ISO Standards and must be populated. This format is not validated by the system, it is an example format only.</p> <p>Example: 2017111202120020101BSRFP0000000013</p>
<p>INDEX: 2.6</p> <p>FICdtTrf +CdtTrfTxInf ++PmtId +++ClrSysRef</p>	<p>Name: Clearing System Reference</p> <p>ISO Description: Unique reference, as assigned by a clearing system, to unambiguously identify the instruction.</p> <p>Product Usage: Identification of the Reconciliation Window within which this transaction is processed. The identification is supplied by RTP.</p> <p>XML Tag: <ClrSysRef></p> <p>Occurrence: [0..1]</p> <p>Length: 35</p> <p>Rule(s): Only present in messages from RTP to the Debtor FI and Creditor FI</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if XML parsing error occurs - otherwise this field is not checked on incoming messages.</p> <p>Example: 001</p>
<p>INDEX: 2.7</p> <p>FICdtTrf +CdtTrfTxInf ++PmtTpInf</p>	<p>Name: Payment Type Information</p> <p>ISO Description: Set of elements used to further specify the type of transaction.</p> <p>XML Tag: <PmtTpInf></p> <p>Occurrence: [1..1]</p>
<p>INDEX: 2.10</p> <p>FICdtTrf +CdtTrfTxInf ++PmtTpInf +++SvcLvl</p>	<p>Name: Service Level</p> <p>ISO Description: Agreement under which or rules under which the transaction should be processed.</p> <p>XML Tag: <SvcLvl></p> <p>Occurrence: [1..1]</p>
<p>INDEX: 2.11</p> <p>FICdtTrf +CdtTrfTxInf ++PmtTpInf +++SvcLvl</p>	<p>Name: Code</p> <p>ISO Description: Specifies a pre-agreed service or level of service between the parties, as published in an external service level code list.</p> <p>Product Usage: The Service level of the transaction. 'SDVA' means FI Credit Transfer must be executed with same day value to the creditor (for RTP this will be done in seconds).</p>

Element	Details
++++Cd	<p>XML Tag: <Cd></p> <p>Occurrence: [1..1]</p> <p>Length: 4</p> <p>Rule(s): Expected value of 'SDVA'</p> <p>Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002) if Service Level Code is not valid.</p> <p>Note(s): This is a mandatory ISO field required for the message type, but not used by RTP.</p> <p>Example: SDVA</p> <p>Permitted Codes</p> <p>SDVA SameDayValue</p>
<p>INDEX: 2.19</p> <p>FICdtTrf</p> <p>+CdtTrfTxInf</p> <p>++IntrBkSttlmAmt</p>	<p>Name: Interbank Settlement Amount</p> <p>ISO Description: Amount of money moved between the instructing agent and the instructed agent.</p> <p>Product Usage: The total amount that the Debtor FI will be obligated to pay the Creditor FI upon the Creditor FI's acceptance of the payment instructed by the FI Credit Transfer (pacs.009) message.</p> <p>XML Tag: <IntrBkSttlmAmt></p> <p>Occurrence: [1..1]</p> <p>Rule(s): Transaction is validated against:</p> <ul style="list-style-type: none"> - Payment Type Limit (STL) - Global Transaction Limit (SITL) - Net Position to ensure the transaction amount will not cause the Prefunded Balance to be exceeded <p>Total Interbank Settlement Amount must be equal to Interbank Settlement Amount.</p> <p>Reason Code(s): Reject with Message Status Report (pacs.002) code:</p> <ul style="list-style-type: none"> - 'AM04' if Net Position breaches Prefunded Balance <p>In case for structural validation failure, the RTP Network will reject with code '650' in Administration Advice message (admi.002) if:</p> <ul style="list-style-type: none"> - The value of the Credit Transfer amount is less than or equal to zero - The value of the Credit Transfer is greater than supported by the ISO definition for the maximum number of digits (total 18 digit) - The currency code is not valid (i.e. not USD) - The number of decimal digits is greater than the specified number of digits as defined by the ISO4217 definition <p>Reject with code 'AM12' in Message Status Report (pacs.002) if Total Interbank Settlement Amount is not equal to</p>

Product Usage: Used to provide additional remittance related information. XML Tag: <Ustrd> Occurrence: [0..1] Format: Maximum 140 characters. Length: 140 Example: Unstructured Information

16 MESSAGE STRUCTURE SPECIFICATION ADMINISTRATION

This chapter defines the standard and proprietary message formats used by the TCH Real Time Payment system (RTP) for sending and receiving Administration messages, between RTP and Participants using the System.

It provides an understanding of the following:

- The ISO 20022 message structure of the admi.002 (Message Reject) and the admi.004 (System Event Notification)
- The proprietary structure of the admn.001 through admn.006 messages (i.e. admn.001-6) for Sign-On/Sign-Off and Echo messages used in RTP
- The required data types and usage rules of the data fields in the messages
- Example layouts of the defined message format

16.1 System Event Notification – admi.004.001.02

RTP will use the System Event Notification message to inform Participants of an event that is either going to occur or has occurred in the System. The System Notification Message will contain either structured or unstructured data.

The System Notification Message is used to:

- Notify all Participants when a system wide event occurs (e.g. a Participant is now 'Available' or 'Unavailable' for receiving messages)
- Notify a Participant of events that are unique to that Participant (e.g. Low Watermark breach)
- Provide the system operator with the ability to send free format messages to either a specific Participant or all Participants

16.1.1 Message Structure Description

Index	XML Tag	Element Name	Occurr.	Length	M/O/C
	SysEvtNtfctn	System Event Notification V02	[1..1]		M
1.0	└─ EvtInf	Event Information	[1..1]		M
1.1	└─ EvtCd	Event Code	[1..1]	4	M
1.2	└─ EvtParam	Event Parameter	[1..n]	35	M
1.3	└─ EvtDesc	Event Description	[0..1]	1000	O
1.4	└─ EvtTm	Event Time	[1..1]	19	M

16.1.2 Detail Message Field Description

Element	Details
SysEvtNtfctn	<p>Name: System Event Notification V02</p> <p>Product Usage: The System Event Notification message is sent by RTP to notify participants of the occurrence of an event. RTP will use the System Event Notification message to inform Member Banks of an event that is going to occur or has occurred in the System. The System Notification Message may contain either structured or unstructured data. The System Notification Message is used to notify:</p> <ul style="list-style-type: none"> - Member Banks on system wide events e.g. other participants are now available or unavailable for receiving payments - specific Member Banks on events that are unique to them e.g. Debit Cap alerts <p>In addition, the system operator has the ability to send free format messages to Member Banks.</p> <p>XML Tag: <SysEvtNtfctn></p> <p>Occurrence: [1..1]</p>
INDEX: 1.0 SysEvtNtfctn +EvtInf	<p>Name: Event Information</p> <p>ISO Description: Detailed information about a system event.</p> <p>XML Tag: <EvtInf></p> <p>Occurrence: [1..1]</p>
INDEX: 1.1 SysEvtNtfctn +EvtInf ++EvtCd	<p>Name: Event Code</p> <p>ISO Description: Proprietary code used to specify an event that occurred in a system.</p> <p>Product Usage: Message Type. Refer to SNM Data Elements identified in the defined data structures below for list of supported events.</p> <p>XML Tag: <EvtCd></p> <p>Occurrence: [1..1]</p> <p>RegEx: [a-zA-Z0-9]{1,4}</p> <p>Length: 4</p> <p>Example: 971</p>
INDEX: 1.2 SysEvtNtfctn +EvtInf ++EvtParam	<p>Name: Event Parameter</p> <p>ISO Description: Describes the parameters of an event which occurred in a system.</p> <p>Product Usage: Describes the parameters of the event that occurred in RTP.</p> <p>XML Tag: <EvtParam></p> <p>Occurrence: [1..unbounded]</p> <p>Format: The first <EvtParam> will always be the Message ID The second <EvtParam> will always be the class of Message (Notification or Broadcast).</p> <p>Length: 35</p>

Element	Details
INDEX: 1.3 SysEvtNtfctn +EvtInf ++EvtDesc	<p>Note(s): Detailed specification for the values required for each type of Event are detailed in the section below.</p> <p>Example: M20160223021200201H0009101</p> <p>Name: Event Description</p> <p>ISO Description: Free text used to describe an event which occurred in a system.</p> <p>Product Usage: This item may contain structured or unstructured data information.</p> <p>XML Tag: <EvtDesc></p> <p>Occurrence: [0..1]</p> <p>Length: 1000</p> <p>Example: There will be a scheduled test on 20 Mar 2016</p>
INDEX: 1.4 SysEvtNtfctn +EvtInf ++EvtTm	<p>Name: Event Time</p> <p>ISO Description: Date and time at which the event occurred.</p> <p>Product Usage: Date and time the message was created by RTP.</p> <p>XML Tag: <EvtTm></p> <p>Occurrence: [1..1]</p> <p>Length: 19</p> <p>Note(s): The date is required to be set to Eastern Time (ET).</p> <p>Example: 2015-02-23T10:09:33</p>

16.2 System Event Notification – Data Structure

The following sections provide details on the structure and required field values of the various System Notification Message (SNM) generated by the System.

Note:

All amounts in System Notification Messages are expressed in pennies with an implied decimal to the left of the last two digits (e.g. 10000 represents \$100.00). The examples below do not include the Business Application Header (BAH).

16.2.1 Connectivity Status Broadcast (960)

Informs all Participants of a change in the status of a Connection. This broadcast message will be sent if the System detects that the Participant's network connectivity becomes unavailable or is restored from an unavailable status.

Name	M/O	Usage	Value
Event Code	M	Message Type	'960'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Broadcast'
Connection Owner Identification	M	Participant Identifier (11 characters) of the owner of the Technical Connection (either Participant or TPSP).	e.g. '12345678901'
Connection Identification	M	Connection Identification of the Technical Connection that has had a status change (13 Characters)	e.g. '1234567890101'
Availability (connectivity)	M	Indicates whether the technical connectivity has become available or is now unavailable.	'AVAILABLE' or 'UNAVAILABLE'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Connectivity Status Broadcast message (XML Format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>960</ne:EvtCd>
      <ne:EvtParam>580082</ne:EvtParam>
      <ne:EvtParam>Broadcast</ne:EvtParam>
      <ne:EvtParam>12345678901</ne:EvtParam>
      <ne:EvtParam>1234567890101</ne:EvtParam>
      <ne:EvtParam>UNAVAILABLE</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.2 Funding Agent TPL Multiple Change Notification (961)

Informs the Funding Agent that the Tracking Position Limit (TPL) Multiple for its Funding Account has been changed.

Name	M/O	Usage	Value
Event Code	M	Message Type	'961'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Notification'
Member Identifier	M	Funding Account Identifier (11 characters)	e.g. '12345678901'
Name	M	Name of the Funding Agent	e.g. 'AgentXYZ'
Currency	M	The currency of the settlement	'USD'
New TPL Multiple	M	Value of the new TPL Multiple	e.g. '300000.0'
Previous TPL Multiple	M	Value of the previous TPL Multiple	e.g. '250000.0'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Funding Agent TPL Multiple Change Notification (XML Format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>961</ne:EvtCd>
      <ne:EvtParam>580082</ne:EvtParam>
      <ne:EvtParam>Notification</ne:EvtParam>
      <ne:EvtParam>12345678901</ne:EvtParam>
      <ne:EvtParam>AgentXYZ</ne:EvtParam>
      <ne:EvtParam>USD</ne:EvtParam>
      <ne:EvtParam>300000.0</ne:EvtParam>
      <ne:EvtParam>250000.0</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.3 TPL Change Status Notification (962)

Informs Non-funding Participant that its Tracking Position Limit has changed.

Note: A copy of the notification will be published to the Funding Agent.

Name	M/O	Usage	Value
Event Code	M	Message Type	'962'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Notification'
Member Identifier	M	Participant Identifier (11 characters)	e.g. '90112345678'
Name	M	Name of the Non-funding participant	e.g. 'BofABC'
Currency	M	The currency of the settlement	'USD'
TPL Multiple change status	M	Status of the change request	'SUCCESS' or 'FAILURE'
New TPL	M	Value of the new TPL	e.g. '30000'
Previous TPL	M	Value of the previous TPL	e.g. '25000'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: TPL Change Status Notification (XML Format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>962</ne:EvtCd>
      <ne:EvtParam>580083</ne:EvtParam>
      <ne:EvtParam>Notification</ne:EvtParam>
      <ne:EvtParam>901 12345678</ne:EvtParam>
      <ne:EvtParam>BofABC</ne:EvtParam>
      <ne:EvtParam>USD</ne:EvtParam>
      <ne:EvtParam>SUCCESS</ne:EvtParam>
      <ne:EvtParam>30000</ne:EvtParam>
      <ne:EvtParam>25000</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.4 System Status Broadcast (971)

Informs all Participants if the System changes its status to either suspended or available:

Name	M/O	Usage	Value
Event Code	M	Message Type	'971'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Broadcast'
New Service Status	M	The new status of the System NORMAL – the status of the System is not suspended and open for activities. SUSPENDED – the system is suspended for all activities.	'NORMAL' or 'SUSPENDED'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: System Status Broadcast message (XML format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>971</ne:EvtCd>
      <ne:EvtParam>580013</ne:EvtParam>
      <ne:EvtParam>Broadcast</ne:EvtParam>
      <ne:EvtParam>NORMAL</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.5 Participant Suspend Broadcast (972)

Informs all Participants if an FI's status is changed to Suspended or has returned to normal. **Note:** A copy of the notification will be published to the Funding Agent

Name	M/O	Usage	Value
Event Code	M	Message Type	'972'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Broadcast'
Currency	M	The currency of the settlement	'USD'
Member Identification	M	Participant Identifier (11 characters)	e.g. '12345678901'
Name	M	Name of the Participant	e.g. 'BofXYZ'
Default Status	M	Displays the Participant's current default status. NORMAL – the status of the FI is not suspended and open for all message activity. DEFAULTBOTH – the reported FI is suspended for all message activity.	'DEFAULTBOTH' or 'NORMAL'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Participant Suspend Broadcast message (XML Format)

```
<SystemNotificationEvent>
<ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
  <ne:EvtInf>
    <ne:EvtCd>972</ne:EvtCd>
    <ne:EvtParam>580014</ne:EvtParam>
    <ne:EvtParam>Broadcast</ne:EvtParam>
    <ne:EvtParam>USD</ne:EvtParam>
    <ne:EvtParam>12345678901</ne:EvtParam>
    <ne:EvtParam>BofXYZ</ne:EvtParam>
    <ne:EvtParam>NORMAL</ne:EvtParam>
    <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
  </ne:EvtInf>
</ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.6 Settlement Individual Transaction Limit Status / Change Broadcast (975)

Informs Participants and Funding Agents that the System-wide, maximum permitted amount for any payment type has been changed (i.e. the System wide limit for Credit Transfers has been changed).

It should be noted that RTP only permits Credit Transfer payments and as such the SITL will always be the same as the STL.

Name	M /O	Usage	Value
Event Code	M	Message Type	'975'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Broadcast'
Currency	M	The currency of the settlement	'USD'
Currency Status	M	Status of the Currency	'ACTIVE' or 'INACTIVE'
New Currency Limit	M	Value of new Settlement Individual Transaction Limit (SITL)	If status is 'INACTIVE' this must be 0 (zero)
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Settlement Individual Transaction Limit Status/ Change Broadcast message (XML Format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>975</ne:EvtCd>
      <ne:EvtParam>580015</ne:EvtParam>
      <ne:EvtParam>Broadcast</ne:EvtParam>
      <ne:EvtParam>USD</ne:EvtParam>
      <ne:EvtParam>INACTIVE</ne:EvtParam>
      <ne:EvtParam>0</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.7 Security Transaction Limit Change Broadcast (976)

Informs Participants and Funding Agents that the System-wide maximum permitted amount for a specific payment type (Security Transaction Limit – STL) has been changed (i.e. the maximum allowable amount in a Credit Transfer payment message).

It should be noted that RTP only permits Credit Transfer payments and as such the STL will always be the same as the SITL.

Name	M/O	Usage	Value
Event Code	M	Message Type	'976'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Broadcast'
Currency	M	The currency of the settlement	'USD'
Payment Type	M	The type of payment for which the change is being made	'CREDITTRANSFER'
Global Limit Status	M	Status of the Security Transaction Limit	'ACTIVE' 'INACTIVE'
New Global Limit	M	Value of new Security Transaction Limit	If status is 'INACTIVE' this must be 0 (zero)
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Security Transaction Limit Change Broadcast message (XML Format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>976</ne:EvtCd>
      <ne:EvtParam>580016</ne:EvtParam>
      <ne:EvtParam>Broadcast</ne:EvtParam>
      <ne:EvtParam>USD</ne:EvtParam>
      <ne:EvtParam>CREDITTRANSFER</ne:EvtParam>
      <ne:EvtParam>INACTIVE</ne:EvtParam>
      <ne:EvtParam>0</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.8 Free Format Broadcast or Notification (981)

The System has the ability to allow the RTP Operator to send a message to either one or all System Participant(s) and Funding Agents. The System Operator decides whether the message is

for all Participants and Funding Agents or a single Participant or Funding Agent when the message is created. For a message to a single Participant or a single Funding Agent, the message class shall be 'Notification'. If the message is meant for all Participants and Funding Agents, the message class shall be 'Broadcast'.

Name	M/O	Usage	Value
Event Code	M	Message Type	'981'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Broadcast' or 'Notification'
Member Identification	O	Participant / Funding Account Identifier (11 characters) – only used if Message Class is 'Notification'	e.g. '12345678901'
Name	O	Name of the Participant / Funding Agent – only used if Message Class is 'Notification'	e.g. 'BofXYZ'
Event Description (Free format text)	M	Any free format unstructured text up to 1000 characters	e.g. 'There will be a scheduled test on 20 Mar 2016'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Free Format message (XML Format)**Broadcast:**

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">

    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.9 Participant Status Broadcast (982)

The system informs all Participants that a specific Participant's sign-on status has changed to Sign-on/Sign-off. This is the result of the Participant sending a Sign-on or Sign-off message (either direct or via TPSP) to RTP.

Name	M/ O	Usage	Value
Event Code	M	Message Type	'982'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Broadcast'
Participant Identification	M	Participant Identifier (11 characters)	e.g. '12345678901'
Participant Name	M	Participant name of the Sign-on/Sign-off	e.g. 'BofXYZ'
Sign-on	M	Indicates whether the FI is Signed-on or Signed-off from System	'SIGNON' or 'SIGNOFF'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Participant Status Broadcast message (XML Format)

```
<SystemNotificationEvent>
<ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
  <ne:EvtInf>
    <ne:EvtCd>982</ne:EvtCd>
    <ne:EvtParam>580082</ne:EvtParam>
    <ne:EvtParam>Broadcast</ne:EvtParam>
    <ne:EvtParam>12345678901</ne:EvtParam>
    <ne:EvtParam>BofXYZ</ne:EvtParam>
    <ne:EvtParam>SIGNON</ne:EvtParam>
    <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
  </ne:EvtInf>
</ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.10 Available Prefunded Balance Warning Notification (993)

This message informs a Funding Participant, Funding Agent, or Non-Funding Participant and its Funding Agent that their Available Prefunded Balance has either: dropped below the established Low Watermark threshold or has returned to a normal level (High Watermark) following a Low Watermark warning. It should be noted that if the Low Watermark notification is ignored, it could result in a payment transaction being rejected due to insufficient funds.

Note:

Funding Participants and Funding Agents will be able to define their own Low and High Watermark values for alerts as either a percentage of their Prefunded Balance at the opening of the current reconciliation window or a fixed Dollar value. These alerts can be used by the Participant or Funding Agent to help manage the Participant's liquidity in the System. Funding Agents also manage the Low and High Watermark values for each of their Non-Funding Participants.

A copy of the notification will be published to the Funding Agent in case of non-funding participants

Name	M/O	Usage	Value
Event Code	M	Message Type	'993'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Notification'
Member Identification	M	Participant / Funding Account Identifier (11 characters) In the case of a non-funding Participant, the Participant ID will be present, and the message will be copied to the Funding Agent.	e.g. '12345678901'
Name	M	Name of Participant / Funding Agent	e.g. 'BofXYZ'
Currency	M	The currency of the settlement	'USD'
Available Prefund Balance Status	M	The status of the Prefunded Balance for the specified currency	'NORMAL' or 'EXCEEDED'
Opening Prefunded Balance	M	The value of the opening Prefunded Balance	e.g. '10000000'
Low Watermark Value	M	Value below which balance warning is triggered	e.g. '100000'
High Watermark Value	M	Value above which returns the status to 'NORMAL'	e.g. '300000'
Available Prefund Balance	M	Value which triggers the SNM either status 'EXCEEDED' (below Low Watermark) or 'NORMAL' (above High Watermark)	e.g. '95000' or '310000'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Available Prefunded Balance Notification message (XML Format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>993</ne:EvtCd>

      <ne:EvtParam>12345678901</ne:EvtParam>
      <ne:EvtParam>BofXYZ</ne:EvtParam>
      <ne:EvtParam>USD</ne:EvtParam>
      <ne:EvtParam>EXCEEDED</ne:EvtParam>
      <ne:EvtParam>100000000</ne:EvtParam>
      <ne:EvtParam>100000</ne:EvtParam>
      <ne:EvtParam>300000</ne:EvtParam>
      <ne:EvtParam>95000</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.11 Prefunded Balance Breach Notification (994)

This message informs a Participant and/or Funding Agent that a transaction was rejected due to insufficient funding in the RTP Prefunded Account (or insufficient Tracking Position in the case of a Non-Funding Participant).

In such a scenario the payment is rejected with a pacs.002 and reason code 'AM04'. In addition to the pacs.002 rejecting the payment, this SNM is sent so that the Participant or Funding Agent can alert their Treasury department and provide required supplemental funding or adjust a Tracking Position Limit as necessary.

Note: A copy of the notification will be published to the Funding Agent in case of non-funding participant.

Name	M /O	Usage	Value
Event Code	M	Message Type	'994'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Notification'
Member Identification	M	Participant / Funding Account Identifier (11 characters) In the case of a non-funding Participant, the Participant ID will be present and the Funding Agent will receive a copy of the message. In the case of a Funding Agent, the Funding Account ID will be present.	e.g. '123456789001'
Name	M	Name of Participant / Funding Agent	e.g. 'BofXYZ'
Currency	M	The currency of the settlement	USD
Prefunded Balance Breach Status	M	The reason for the message	'PAYMENT RJCT'
Prefunded Balance	M	The value of the Prefunded Balance on the site processing the payment request	e.g. '100000000'
Net Position	M	The value of the Participant Net Position on the site processing the payment request at the time the payment request was blocked	e.g. '99999990'
Instruction Id	M	The unique identifier of the payment that would have caused the Prefunded Balance to be breached. Field 'Instruction Identification' from pacs.008.	e.g. '20151115021200201BFFF0000000001'
Payment Amount	M	The amount of the payment that would have caused a breach of	e.g. '25000'

Name	M /O	Usage	Value
Residual Prefunded Balance Position	M	the Prefunded Balance The difference between the Prefunded Balance and the FI's Net Position on the site processing the payment request. This is always a positive number.	e.g. '10'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Prefunded Balance Breach Notification message (XML Format)

```

<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">

  </ne:SysEvtNtfctn>
</SystemNotificationEvent>

```

16.2.12 Prefunded Requirement Change Notification (996)

This message informs a Participant and/or Funding Agent that their Prefunded Requirement has been changed. This figure limits the Disbursement of funds. This will occur when RTP system operator changes this value for a participant.

Name	M/ O	Usage	Value
Event Code	M	Message Type	'996'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Notification'
Member Identification	M	Participant / Funding Account Identifier (11 characters)	e.g. '12345678901
Name	M	Name of the Participant / Funding Agent	e.g. 'BofXYZ'
Currency	M	The currency of the settlement	'USD'
New Prefunded Requirement	M	Value of new Prefunded Requirement	e.g. '30000'
Previous Prefunded Requirement	M	Value of previous Prefunded Requirement	e.g. '10000'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Prefunded Balance Change Notification message (XML Format)

```
<SystemNotificationEvent>
<ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:20022:tech:xsd:admi.004.001.02">
<ne:EvtInf>
<ne:EvtCd>996</ne:EvtCd>
<ne:EvtParam>580096</ne:EvtParam>
<ne:EvtParam>Notification</ne:EvtParam>
<ne:EvtParam>12345678901</ne:EvtParam>
<ne:EvtParam>BofXYZ</ne:EvtParam>
<ne:EvtParam>30000</ne:EvtParam>
<ne:EvtParam>10000</ne:EvtParam>
<ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
</ne:EvtInf>
</ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.13 Prefunded Balance Change Notification (998)

This message informs a Participant and/or Funding Agent that their Prefunded Balance has been changed. This will occur as a result of the Participant (or its Funding Agent) submitting Supplemental Funding through Fedwire, the Participant (or its Funding Agent) requesting a Disbursement through the RTP Management Portal, or the System Operator performing a manual adjustment to the Participant or Funding Agent's prefunded position.

Note: A copy of the notification will be published to the Funding Agent in case of non-funding participant.

Name	M/O	Usage	Value
Event Code	M	Message Type	'998'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Notification'
Member Identification	M	Participant / Funding Account Identifier (11 characters)	e.g. '12345678901'
Name	M	Name of the Participant / Funding Agent	e.g. 'BofXYZ'
Currency	M	The currency of the settlement	'USD'
Prefunded Balance Change Status	M	Status of the change request	'SUCCESS' or 'FAILURE'
New Prefunded Balance	M	Value of new balance	e.g. '30000'
Previous Prefunded Balance	M	Value of previous balance	e.g. '10000'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Prefunded Balance Change Notification message (XML Format)

```
<SystemNotificationEvent>
  <ne:SysEvtNtfctn xmlns:ne="urn:iso:std:iso:2002:tech:xsd:admi.004.001.02">
    <ne:EvtInf>
      <ne:EvtCd>998</ne:EvtCd>
      <ne:EvtParam>580098</ne:EvtParam>

      <ne:EvtParam>BofXYZ</ne:EvtParam>
      <ne:EvtParam>USD</ne:EvtParam>
      <ne:EvtParam>SUCCESS</ne:EvtParam>
      <ne:EvtParam>30000</ne:EvtParam>
      <ne:EvtParam>10000</ne:EvtParam>
      <ne:EvtTm>2016-02-15T11:59:28</ne:EvtTm>
    </ne:EvtInf>
  </ne:SysEvtNtfctn>
</SystemNotificationEvent>
```

16.2.14 Reconciliation Status Notification (999)

The System sends an automated notification to all Participants and Funding Agents when a Reconciliation Window has been closed and a new one opened.

The notification includes:

- The Previous (Closed) Reconciliation Window ID
- The New (Open) Reconciliation Window ID
- The Opening Available Balance for the Participant/Funding Agent as at the start of the New Reconciliation Window
- Number and Value of supplemental funding or drawdowns

Note: Funding Agents will receive a copy of each Non-Funding Participant’s message, and will also receive a message pertaining to its Prefunded Position during the Reconciliation Window.

Name	M/ O	Usage	Value
Event Code	M	Message Type	'999'
Event Parameter (multiple)			
Message Identification	M	Message Identification assigned by RTP	Switch generated ID
Message Class	M	Message Classification	'Notification'
Previous Reconciliation Window Date	M	The date of the Reconciliation Window for which this report is provided. Format YYYY-MM-DD.	e.g. '2016-02-15'
Previous Reconciliation Window ID	M	The identifier for the Reconciliation Window for which this report is provided.	e.g. '001'
Previous Reconciliation Window Status	M	Shows the status of the Reconciliation Window for which this report is provided.	'COMPLETE'
Reconciliation Checkpoint Cut Off Date and Time	M	“The time the Reconciliation Checkpoint was cut off (i.e. when the Reconciliation Window process ended). Format YYYY-MM-DDThh:mm:ss Note – ‘T’ is a fixed value representing the time”	e.g. '2016-02-15T11:00:00'
New Reconciliation Window Date	M	The date the new Reconciliation Window was started in the format YYYY-MM-DD.	e.g. '2016-02-15'
New Reconciliation Window ID	M	The identifier for the new Reconciliation Window	e.g. '002'
New Reconciliation Window Status	M	Shows the status of the new Reconciliation Window.	'INPROGRESS'

Name	M/ O	Usage	Value
Currency	M	The currency of the settlement in Reconciliation Window	'USD'
Member Identification	M	Participant / Funding Account Identifier (11 characters) In the case of a non-funding Participant, the Participant ID will be present and the Funding Agent will receive a copy of the message. In the case of a Funding Agent, the Funding Account ID will be present.	e.g. '12345678901'
Name	M	Name of the Participant / Funding Agent	e.g. 'BofXYZ'
Previous Opening Prefunded Balance	M	Value of the Opening Prefunded Balance at the start of the closed Reconciliation Window	e.g. '30000'
New Opening Prefunded Balance	M	Value of the Opening Prefunded Balance at the start of the new Reconciliation Window.	e.g. '200000'
Number of Credit Transfer received and accepted	M	Total Number of Credit Transfer received and accepted	e.g. '105'
Value of Credit Transfer received and accepted	M	Total Value of Credit Transfer received and accepted	e.g. '150000'
Number of Credit Transfer received and rejected	M	Total Number of Credit Transfer received and rejected	e.g. '4'
Value of Credit Transfer received and rejected	M	Total Value of Credit Transfer received and rejected	e.g. '443'
Number of Credit Transfer sent and accepted	M	Total Number of Credit Transfer send and accepted	e.g. '605'
Value of Credit Transfer sent and accepted	M	Total Value of Credit Transfer send and accepted	e.g. '50000'
Number Credit Transfer sent and rejected	M	Total Number of Credit Transfer send and rejected	e.g. '15'
Value of Credit Transfer sent and rejected	M	Total Value of Credit Transfer send and rejected	e.g. '63443'
Net Position	M	Net Position at the end of the Reconciliation Window that is closing	e.g. '100000'
Count of supplemental funding	M	Number of supplemental funding transactions made during the previous Reconciliation Window	e.g. '1'
Gross value of supplemental funding	M	Value of supplemental funding transactions made during the previous Reconciliation Window	e.g. '80000'
Count of drawdowns	M	Number of drawdown transactions made during the previous Reconciliation Window	e.g. '1'

Name	M/O	Usage	Value
Gross value of drawdowns	M	Value of drawdown transactions made during the previous Reconciliation Window	e.g. '10000'
Event Date Time	M	Date and time when the message was created in the format: YYYY-MM-DDThh:mm:ss Note – 'T' is a fixed value representing the time	e.g. '2016-02-15T11:59:28'

Example: Reconciliation Status Notification message (XML Format)

16.3 Message Reject – adm.002.001.01

16.3.1 Scope

RTP and Participants will use the “Message Reject” message to indicate the rejection of a message that has been received and cannot be interpreted. This message will be used if:

- An incoming message cannot be parsed according to the XSD specification (reason code ‘650’)
- Incoming message with a sending Routing Key cannot be found (reason code ‘650’)
- The Digital Signature of a message cannot be verified (reason code ‘690’)
- A calculated Digital Signature does not match the Digital Signature of the message (reason code ‘690’)

Note: Detailed information about Digital Signature is provided in the Bank Interface Specification document.

16.3.2 Message Structure Description

Index	XML Tag	Element Name	Occurr.	Length	M/O/C
	adm.002.001.01	Message Reject V01	[1..1]		M
1.0	— RltdRef	Related Reference	[1..1]		M
1.1	— Ref	Reference	[1..1]	35	M
2.0	— Rsn	Reason	[1..1]		M
2.1	— RjctgPtyRsn	Rejecting Party Reason	[1..1]	35	M
2.5	— AddtlData	Additional Data	[0..1]	20000	M

16.3.3 Detail Message Field Description

Element	Details
admi.002.001.01	<p>Name: Message Reject V01</p> <p>Product Usage: RTP and Participants will use the Message Reject message to notify the rejection of a previously received message. RTP and Participants will issue a Message Reject when:</p> <ul style="list-style-type: none"> - An incoming message cannot be parsed according to the XSD. - A digital signature cannot be verified. - A digital signature does not match the digital signature of the message. <p>XML Tag: <admi.002.001.01></p> <p>Occurrence: [1..1]</p>
<p>INDEX: 1.0</p> <p>admi.002.001.01 +RltdRef</p>	<p>Name: Related Reference</p> <p>ISO Description: Refers to the identification of the message previously received and for which the rejection is notified.</p> <p>Product Usage: Usage of the Related Reference element is not according to the ISO 20022 standard usage. The reference provided in this element is a newly generated reference to identify the message reject.</p> <p>XML Tag: <RltdRef></p> <p>Occurrence: [1..1]</p>

INDEX: 1.1

admi.002.001.01
 +RltdRef
 ++Ref

Name: Reference

ISO Description: Business reference of the present message assigned by the party issuing the message. This reference must be unique amongst all messages of the same name sent by the same party.

Product Usage: The unique ID for the Rejection Message as assigned by the Instructing FI or the System creating the rejection message. The entity that is initiating the message (the Instructing FI or RTP) is responsible for ensuring the uniqueness of this field.

XML Tag: <Ref>

Occurrence: [1..1]

Format: Format: YYYYMMDDHHMMSSbbbbbbbbbbXXXXXXXXXX

Pos. 01-14 - File creation date in format YYYYMMDDHHMMSS

Pos. 15-25 - 11 character Participant Identifier for FIs or RTP

Pos. 26-35 - Message serial number (10 alphanumeric characters)

RegEx: [0-9]{4}(((01|03|05|07|08|10|12)((0[1-9])|([1-2][0-9])|(3[0-1])))|((04|06|09|11)((0[1-9])|([1-2][0-9])|30))|((02)((0[1-9])|([1-2][0-9]))))|(((0-1)[0-9])|(2[0-3])|((0-5)[0-9])){2})[A-Z0-9]{11}.*

Length: 35

Rule(s): The Reference structure position 01 to 25 is validated for structural alignment according to the format specification.

Reason Code(s): In case for structural validation failure, the RTP Network will reject with code '650' in Administration Advice message (admi.002).

Note(s): Identification of the original sender of the rejected message is provided in the additional data field copied from the

16.4 Sign-On Request – admn.001.001.01

16.4.1 Scope

When an FI wishes to send or receive messages i.e. when they first join RTP or following a period of scheduled maintenance, they must formally Sign-on to the System. This is achieved by sending a Sign-on Request. Similarly, if an FI needs to Sign-off from the System e.g. to undertake system maintenance, they must sign-off from the System by sending a Sign-off request.

When an FI is Signed-on, it remains Signed-on until it sends a Sign-off message. It is anticipated that most FI's, once signed-on, will remain Signed-on indefinitely. There should be very few cases where an FI needs to sign-off.

When an FI changes status to signed-on or signed-off, a broadcast SNM is sent to the RTP community, to advise them of the change.

16.6 Sign-Off Request – admn.003.001.01

16.6.1 Scope

The FI uses a Sign-off Request Message to Sign-off from RTP.

The FI sends the Sign-off message to RTP in the event they need to bringing down their Real Time Payments (RTP) services (as an example this may be for a technical issue or some sort of maintenance). It is expected that FI Sign-off from RTP will be a rare event.

16.8 Echo Request – admn.005.001.01

16.8.1 Scope

Echo Messages are used to check Participant Connection responsiveness during periods of no transaction activity. The message exchange can be initiated by either the System or by a Participant (directly connected FI or Third Party Service Provider “TPSP”). The opposite party is required to respond to an Echo Request with an Echo Response.

The System initiates a message exchange at a configurable interval when there has been no message received or sent from a Participant Connection. The System marks the Participant Connection as being unavailable if, after a number of attempts (configurable), there is no Echo Response from the Participant, or other message received.

When the System next receives an incoming message from the Participant Connection, the Participant Connection is marked as being “available” again.

When a Connection status changes to available or unavailable, a broadcast SNM is sent to the RTP community, to advise them of the change.

Note: While RTP is required to send an Echo Request to ensure that Participants are available to receive messages and all Participants must respond to these requests, it is optional for a Participant to send an Echo Request to RTP.

16.8.3 Detail Message Field Description

Element	Details
AdmnEchoReq	<p>Name: Echo Request</p> <p>ISO Description: The Echo Request message is used to perform a connectivity status check between a Participant and RTP.</p> <p>Product Usage: RTP and a Participant will use the Echo Request message to perform the connectivity status check. RTP will attempt to send an Echo Request only when there is no activity from a Participant for a pre-determined length of time (as configured by TCH). The Participant will be marked as Unavailable if no response is received after a number of retries or there are no further requests or responses from it. This will prevent the Participant from receiving or sending payment requests. A System Notification Message will be sent to all Participants to advise them of this unavailability. RTP is required to send an Echo Request in order to ensure that the Participant is available to receive payment requests. It is optional for a Participant to send Echo Request to RTP.</p> <p>XML Tag: <AdmnEchoReq></p> <p>Occurrence: [1..1]</p>

16.9 Echo Response – admn.006.001.01

16.9.1 Scope

RTP and Participants will use the Echo Response message to reply to the Echo Request message. This implies that the Participant Connection or RTP is available to send / receive messages.

16.9.2 Message Structure Description

Index	XML Tag	Element Name	Occurr.	Length	M/O/C

	<p>Occurrence: [1..1] Length: 4 Rule(s): Expected value is 'ACTC' Reason Code(s): The RTP Network will reject with code '650' in Administration Advice message (admi.002). Note(s): There is no need for a reason code 'RJCT' as this is a 'heartbeat' message. If this fails no response message is generated. Example: ACTC</p>
	<p>Permitted Codes</p> <p>ACTC Accepted</p>

16.10 Database Report Request – admn.007.001.01

This chapter defines the standard message formats used in the RTP system for sending a Request to provide Database or Back-Office Reports back to the Participant

This chapter covers the following:

- The message structure of the admn.007 used in RTP for the Report Request
- The message structure of the admn.008 used in RTP for the Participants Unable to TransactReport
- The required data types and usage rules of the data fields in these messages

16.10.1 Scope

The Database Report Request message provides:

- The ability for the Participant to request customer specific defined Database or Back-Office Reports on an ad-hoc basis.

Note: At this point only the Participants Unable to Transact Report can be requested

16.10.2 Message Structure Description

16.11 Participants Unable to Transact Report – admn.008.001.01

16.11.1 Scope

RTP uses the Participants Unable to Transact Message to respond to the Database Report request with report code 'AVLBTY'. The report includes a list of Connections that are Unavailable, Participants that are Signed-Off, and Participants that are Suspended. The Participant or TPSP that send the Database Report Request can use this information to update the local copy of their routing table with the current Participant Availability Status.

16.11.2 Message Structure Description

18 APPENDIX B - REJECT / REASON CODES

All the tables include the reason codes (ISO and non-ISO) used by RTP in the event that a message fails business validation within the system and also the codes that are available to the receiving FIs, when they receive a message that fails business validation within their systems. The ISO lists are a sub-set of the full ISO rejection reason code list and contains those codes that are deemed applicable to RTP. The non-ISO codes are proprietary codes used by RTP as there are no associated ISO reason codes available.

Note: In the event ISO 2022 will provide additional reason codes in the future RTP might change the proprietary reason codes to ISO reason codes

The codes in this document are specifically for business validation failures. Structural errors encountered during processing should result in an Administration Message being returned to the sender.

18.1 Reject / Reason Codes for Message Status Report – pacs.002

18.1.1 List and Usage of ISO Error Codes

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
AC02	FI	Debtor account number invalid or missing	Y	Y	To be used if account is invalid. TCH usage: In case of pacs.009 if debtor account is not linked to participant.
AC03	FI	Creditor account number invalid or missing	Y	Y	To be used if account is invalid. TCH usage: In case of pacs.009 if creditor account is not linked to participant.
AC04	FI	Account number specified has been closed on the bank of account's books.	Y	N	Account closed.
AC06	FI	Account specified is blocked, prohibiting posting of transactions against it.	Y	N	
AC11	FI	Creditor account currency is invalid or missing	Y	N	RTP only supports US Dollar
AC13	FI	Debtor account type invalid	Y	N	Used by the Message Receiver (of a non-value message) to indicate that the debtor account is not an eligible account type (e.g. time-deposit).
AC14	FI	Creditor account type invalid	Y	N	Used by the Receiving Participant to indicate that the receiving account is not an eligible account type (e.g. time-deposit) for RTP Credit Transfers.
AG01	Both	Transaction forbidden on this type of account (formerly NoAgreement)	Y	Y	TCH usage: Agent is not authorized to send or receive this transaction type (pacs.008).

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
AG03	Both	Transaction type not supported / authorized on this account	Y	Y	TCH usage: Agent is not authorized to send or receive this Payment-related message type (e.g. pain.013).
AGNT	TCH	Incorrect Agent	N	Y	Used if Payment Status Request is neither the Instructing or Instructed Agent of the original Credit Transfer.
AM02	TCH	Specific transaction/message amount is greater than allowed maximum	N	Y	
AM04	TCH	Amount of funds available to cover specified message amount is insufficient.	N	Y	Used if 'Net Position breaches Prefunded Balance'
AM09	FI	Amount received is not the amount agreed or expected	Y	N	
AM12	Both	Amount is invalid or missing	Y	Y	Used if 'Total Interbank Settlement Amount is not equal to Interbank Settlement Amount'
AM13	TCH	Transaction amount exceeds limits set by clearing system	N	Y	
AM14	TCH	Transaction amount exceeds limits agreed between bank and client	Y	N	Used to reject a pain.013 if the amount exceeds the amount that the payer would be permitted (by the payer's FI) to send in a pacs.008.
BE04	FI	Specification of creditor's address, which is required for payment, is missing/not correct (formerly IncorrectCreditorAddress).	Y	N	
BE06	FI	End customer specified is not known at associated Sort/National Bank Code or does no longer exist in the books	Y	N	
BE07	FI	Specification of debtor's address, which is required for payment, is missing/not correct	Y	N	
BE10	FI	Debtor country code is missing or invalid	Y	N	System is not validating country code.

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
BE11	FI	Creditor country code is missing or invalid	Y	N	System is not validating country code.
BE16	FI	Debtor identification code missing or invalid	Y	N	
BE17	FI	Creditor identification code missing or invalid	Y	N	
DS24	TCH	Waiting time expired due to incomplete order	N	Y	Used for System Time-out.
DT04	TCH	Future date not supported	N	Y	Used for if 'Date provided is outside of date range.'
DUPL	TCH	Payment is a duplicate of another payment	Y	Y	
DS0H	TCH	Signer is not allowed to sign for this account	N	Y	TCH usage: Sender of the message is not linked to the participant.
FF02	TCH	Syntax error reason is provided as narrative information in the additional reason information.	N	Y	Additional information will be provided in the field 'Additional Information'
FF08	FI	End to End Id missing or invalid	Y	N	
MD07	FI	End customer is deceased.	Y	N	
NARR	FI	Reason is provided as narrative information in the additional reason information.	Y	N	Additional information will be provided in the field 'Additional Information'
RC01	TCH	Bank identifier code specified in the message has an incorrect format (formerly IncorrectFormatForRoutingCode).	N	Y	
RC02	TCH	Bank identifier is invalid or missing.	N	Y	Only used if invalid.
RC03	Both	Debtor FI identifier is invalid or missing	Y	Y	
RC04	Both	Creditor FI identifier is invalid or missing	Y	Y	
SL03	TCH	Token Service did not respond	N	Y	
TM01	TCH	Invalid Cut Off Time	Y	N	Used if Payment Status Request is submitted more than three calendar days after the original Credit Transfer

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
TK01	TCH	Invalid Token	N	Y	
TK02	TCH	Sender Token Not Found	N	Y	
TK03	TCH	Receiver Token Not Found	N	Y	
TK04	Both	Token Expired	Y	Y	
TK05	Both	Token Found with Counterparty Mismatch	Y	Y	
TK06	Both	Token Found with Value Limit Rule Violation	Y	Y	
TK07	Both	Single Use Token Already Used	Y	Y	
TK08	Both	Token Suspended	Y	Y	

18.1.2 List and Usage of non-ISO Error Codes

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
NOAT	FI	Receiving Customer Account does not support/accept this message type.	Y	N	Typically used in response to a Request for Payment when the Debtor customer has not authorised Request for Payment on the account or for the particular Initiator of the Request for Payment.
1100	Both	Any Other Reasons To be used for technical errors that may clear if a message is later retried. Reason is provided as narrative information in the additional reason information.	Y	Y	Additional information will be provided in the field 'Additional Information'
9909	TCH	Central Switch (RTP) system malfunction	N	Y	RTP has been able to receive the payment, but cannot process it because another RTP component is not operational
9910	TCH	Instructed Agent signed-off	N	Y	
9912	TCH	Recipient connection is not available	N	Y	

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
9934	TCH	Instructing Agent signed-off	N	Y	
9941	TCH	Missing proxy (alias) identification	N	Y	RTP received a payment where alias information must be present
9946	TCH	Instructing Agent suspended	N	Y	
9947	TCH	Instructed Agent suspended	N	Y	
9948	TCH	Central Switch (RTP) service is suspended	N	Y	
9952	TCH	Mapping Incompatibility between message versions	N	Y	RTP received a message which cannot be mapped to a higher or lower version.
9953	TCH	Missing code 'FULL' (full invoice amount)	N	Y	
9956	TCH	Instructing Agent Funding Account suspended	N	Y	
9957	TCH	Instructed Agent Funding Account suspended	N	Y	
9964	TCH	Invalid Participant Identification	N	Y	

18.2 Reject / Reason Codes for Response to Request for Payment – pain.014

18.2.1 List and Usage of ISO Error Codes

Reason Code	Usage Requirement	Description	Notes
AC06	FI	Account specified is blocked, prohibiting posting of transactions against it.	
AG01	FI	Transaction forbidden on this type of account (formerly NoAgreement)	The System is not validating the account type.
AG03	FI	Transaction type not supported / authorized on this account	The System is not validating the account type.
AM09	FI	Amount received is not the amount agreed or expected	Used if the customer indicates a problem with the amount of RFP.
AM14	TCH	Transaction amount exceeds limits agreed between bank and client	
BE04	FI	Specification of creditor's address, which is required for payment, is missing/not correct (formerly Incorrect CreditorAddress).	
BE07	FI	Specification of debtor's address, which is required for payment, is missing/not correct	
CH11	FI	Creditor Identifier Incorrect	Customer indicates creditor is unknown.
CUST	FI	Requested By Customer	Customer indicates payment will not be made
DS04	FI	Order Rejected	RFP was rejected by the Participant due to concerns regarding message content.
MD07	FI	End customer is deceased.	
NARR	FI	Reason is provided as narrative information in the additional reason information. To be used for rejections for business reasons that will not clear if a message is later retried.	Additional information will be provided in the field 'Additional Information'
SL12	FI	Debtor has indicated it does not wish to receive RFPs from the Creditor	Participant who received a pain.013 to reject it because the pain.013 was sent to a customer who has "opted out" to receive pain.013 messages.

18.2.2 List and Usage of non-ISO Error Codes

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
1100	FI	Any Other Reasons Reason is provided as narrative information in the additional reason information.	Y	Y	Additional information will be provided in the field 'Additional Information'

18.3 Reject / Reason Codes for Request for Return of Funds - camt.056

18.3.1 List and Usage of ISO Error Codes

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
AC03	FI	Invalid Creditor Account Number - Requested by the customer due to mistake or error	Y	N	
AM09	FI	Wrong Amount - Amount of the Credit Transfer or Request for Payment is not correct.	Y	N	
CUST	FI	Requested By Customer Cancellation requested by the Debtor due to Debtor's mistake or error.	Y	N	
DS24	TCH	Time-out Waiting time expired due to incomplete order	N	Y	
DUPL	FI	Duplicate Payment - Payment is a duplicate of another payment.	Y	N	Only if payment was send with different Instruction Identifications.
FRAD	FI	Fraudulent Origin Debtor claims payment was unauthorized or fraudulently induced.	Y	N	
FRTR	FI	Final Response - Repeat attempt to prior non-response.	Y	N	
TECH	FI	Technical Problem Cancellation requested following technical problems resulting in an erroneous transaction.	Y	N	
UPAY	FI	Undue Payment - Payment has been made through another payment channel (for Request for Payment expiry) or a <i>breach of</i>	Y	N	

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
		<i>RFP Warranty is alleged</i>			

18.3.2 List and Usage of non-ISO Error Codes

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
WIAM	FI	WrongAmount with Indemnity	Y	N	
WICT	FI	With Indemnity Customer	Y	N	
WIDP	FI	With Indemnity Duplicate	Y	N	
WIFD	FI	With Indemnity Fraud	Y	N	
WIFT	FI	Final Response with indemnity	Y	N	
WITH	FI	With Indemnity Technical	Y	N	

18.4 Reject / Reason Codes for Response to Request for Return of Funds - camt.029

18.4.1 List and Usage of ISO Error Codes

Reason Code	Usage Requirement	Description	Used by FI	Used by RTP	Notes
AC04	FI	Closed Account Number Account number specified has been closed on the receiver's books.	Y	N	
AM04	FI	Insufficient Funds Amount of funds available to cover specified message amount is insufficient.	Y	N	
ARDT	FI	Already Returned Cancellation not accepted as the transaction has already been returned.	Y	N	
CUST	FI	Customer Decision Reported when the cancellation cannot be accepted because of a customer decision (Creditor).	Y	N	
LEGL	FI	Legal Decision Reported when the cancellation cannot be accepted because of regulatory rules.	Y	N	
NOAS	FI	No Answer From Customer No response from beneficiary (to the cancellation request).	Y	N	
NOOR	FI	No Original Transaction Received Original transaction (subject to cancellation) never received.	Y	N	

19 APPENDIX C – MESSAGE EXAMPLES

The following examples are all based on the provided Message Specification and in XML format

Most of the examples shown do not include the Business Application Header (BAH) only in case where the BAH is relevant it will be provided.

19.1 Business Application Header – head

These are examples of the Business Application Header in the XML format used with the payload of a Credit Transfer (pacs.008) and the Message Status Report (pacs.002).

Example Message Initiating Agent (Debtor FI) to RTP:

```

<Message xmlns="urn:tch">
  <AppHdr>
    <head:Fr xmlns:head="urn:iso:std:iso:20022:tech:xsd:head.001.001.01">

19.7 Participant Duplicate Checking Requirements Clarification

Receiving Participants are required to check transactions to ensure that they properly handle duplicate transactions. A Credit Transfer message is considered a duplicate if the Instruction ID is identical to a prior Credit Transfer received. If a Receiving Participant receives a Credit Transfer from the RTP system with the copy/duplicate flag included in the business application header, the Receiving Participant should check their internal transaction logs to determine if the transaction is an actual duplicate (i.e. the Receiving Participant had previously received and responded to a Credit Transfer message with the same Instruction ID and the same transaction details), or if this is the first time they are receiving and processing the Credit Transfer, as further specified below. Based on the results of this check the Participant should take one the following actions:

- If the Credit Transfer has not previously been received and processed (Credit Transfer has a unique Instruction ID that had not previously been received/processed), the Receiving Participant should process the transaction “normally” and respond with a pacs.002 **without the copy/duplicate flag in the Business Application Header**;
- If the Credit Transfer is a duplicate of a Credit Transfer that has been previously processed by the Participant (has an Instruction ID that the participant had previously processed and the same transaction details), the Creditor FI should respond with the same outcome as the original pacs.002 response (i.e. the status of the transaction at that time – ACTC, RCJT, ACWP) **with the copy/duplicate indicator included in the Business Application Header**. Note, the payload of the message should be a duplicate of the original pacs.002 created and sent to the system, but the message is required to have a new Business Application Header;
- If the Credit Transfer has a matching Instruction ID to a transaction that was previously received, but the details of the transaction (Creditor Account, Amount and Debtor Account) do not match the original transaction, the Receiving Participant should reject the transaction with a pacs.002 and reason code “DUPL” **and must not include the copy/duplicate indicator in the Business Header**.

If the Receiving Participant receives a Credit Transfer that does not include the copy/duplicate flag in the Business Application Header, but the Receiving Participant has already processed a Credit Transfer with the same Instruction ID, the Receiving Participant must reject the transaction with a pacs.002 and reason code “DUPL”.

20 APPENDIX D – CHANGE VERSION CONTROL

This section contains all the changes covered in the previous versions of the document.

20.1 Change History

Version	Date	Comments
2.9	January 2019	Release 2.9
2.9	April 2019	<p>Update with the final ISO20022 Version 2019 (removed all DRAFT comments)</p> <p>New Functionality:</p> <ul style="list-style-type: none"> - Credit Transfer (pacs.008) inclusion of new optional Element Initiating Party Name to reference ZELLE Sender Identification. - Add Debtor Account Identification for pacs.009 - FI-to-FI Credit Transfer (pacs.009) new chapter 15 <p>Further changes / corrections:</p> <ul style="list-style-type: none"> - Remove all references to acmt.023 and acmt.024 - Update Appendix with new codes - Removed all notes with '%%%' - Removed comment in pain.013 on code ORIG under Discount Applied Amount - Correction Proxy Identification from 2048 to 256 in pacs.008 and pain.013 - Correction of wrong XLM Tag for Accepted Amount in pain.014 Payment Condition Status - Add code AC02 and AC03 in pacs.009 validation. Change code description in Appendix - Add pacs.009 message reference for Time-Out under camt.056 - Removed LEI comments in camt.056 message field Originator - Update "System Time-Out" product usage description throughout camt.056 to account for pacs.009 and pain.013 time-out scenarios - Add note on Original Clearing System Reference to use fixed value '001' as a fixed value if pain.013 is expire (camt.056) - Clarification on Rule(s) for Instructing / Instructed Agent for pacs.028 message - Clarification on Original Transaction / Transaction Id if Token Notification (acmt.022) is generated based on pain.013 - Modification information in acmt.022 cardinality changed from [1..n] to [1..1] - Clarification on Database Availability Report (admn.008) if all participants are available - Update format on Connection Identification in admn.008 with a maximum length of 20 characters and restricted to a-z, A-Z and 0-9
2.9	September 2019	<p>FI-To-FI Credit Transfer (pacs.009) has been deferred from release 2.9. While the message structure and format details are fully documented here, the item will not be included or available in the 2.9 release.</p> <p>Token Notification (acmt.022) has been deferred from release 2.9. The message will first be made available in release 2.10, when tokenization functionality is first available.</p> <p>Updates based on market feedback and final functionality needed for Zelle and Tokenization.</p>

		<ul style="list-style-type: none"> • All Messages <ul style="list-style-type: none"> ○ Maximum length for LEI added (20 characters) Note: not marked as change in the structure and details sections ○ Include message name identifiers for prior message versions to the permitted values in Original Message Name Id for message type camt.026, camt.028, camt.056, camt.029, and pacs.028 • pacs.008 <ul style="list-style-type: none"> ○ Change of error code under Initiating Party from '9952' to '9914' as code '9952' was used for two different scenarios. (reason code change only) ○ New rule for Discount Applied Amount (under structured remittance) - code FULL must be present if code DSCT is used (no impact to participants) ○ Removal of rule under Creditor Account Proxy – previously mandatory for Zelle transactions, now optional (impact to participants using Zelle). ○ Instruction for Creditor Agent <ul style="list-style-type: none"> ▪ new token control codes added (no impact to participants) • pain.013 <ul style="list-style-type: none"> ○ Update to M/O/C table for clarification of some optional and conditional fields. ○ Update to Product Usage for Instruction Identification when the RFP is initiated in relation to Zelle (impact to participants using Zelle) ○ New rule noted for Requested Execution Date - Expiry date must be after or equal to Requested Execution Date (no impact to participants) ○ New rule for Discount Applied Amount (under structured remittance) - code FULL must be present if code DSCT is used (no impact to participants) ○ Removal of rule under Debtor Account Proxy – previously mandatory for Zelle transactions, now optional (impact to participants using Zelle). ○ Instruction for Creditor Agent <ul style="list-style-type: none"> ▪ new added code 'RECI' for Zelle sender identification (impact to participants using Zelle) ▪ new token control codes added (no impact to participants) • camt.056 <ul style="list-style-type: none"> ○ Corrected description for Cancellation Code AC03 and FRTR (no technical impact to participants). • camt.029 <ul style="list-style-type: none"> ○ Additional Note for Cancellation Status Identification describing which value must be included in this field when returning funds outside of RTP (clarification only). • camt.028 <ul style="list-style-type: none"> ○ Creator Agent, previously missing from the structure table, has been added (no impact to participants). • pacs.028 <ul style="list-style-type: none"> ○ Scope update ○ Clarification of Instructing Agent rule ○ Clarification of Instructed Agent rule
--	--	--

		<ul style="list-style-type: none"> • SNM 999 (admi.004) <ul style="list-style-type: none"> ○ Clarified which Net Position is included in the SNM (Net Position of the Reconciliation Window that is closing). • admi.002 <ul style="list-style-type: none"> ○ Updated Index 1.1 format description to indicate that the embedded 11 character identifier can belong to a Participant, TPSP, or the RTP System. • Update Appendix B Error Codes <ul style="list-style-type: none"> ○ Removal of codes AC07, AC10, AM11, BE13, FF03 ○ Updated codes AC13, AC14, 9952, 9953 ○ New codes AC03, AM09, FRTR, UPAY ○ New codes TK01-TK08 • Update Appendix C with new Example Messages
2.9	January 2020	<ul style="list-style-type: none"> • Credit Transfer (pacs.008): <ul style="list-style-type: none"> ○ Changed Instruction Information length to 140 characters (Index 2.1246) ○ Clarified description of Creditor Agent Member ID (Index 2.1025) so that the sender does not need to be aware if the recipient's R/T number is or is not a token. • Request for Payment (pain.013): <ul style="list-style-type: none"> ○ Updated Payment Conditions / Early Payment (Index 2.255) to note that the value 'FALSE' should not be used in this field. ○ Updated Instructions for Creditor Agent / Code (Index 2.793) with Reason Code 9954 for a Zelle message that does not include Code 'RECI'. ○ Updated pain.013 Electronic Address field from required to optional: from [1..1] to [0..1] • RFP Response (pain.014): <ul style="list-style-type: none"> ○ Added note in Additional Information to use the codes "NOAS" and "ARDP" in this field as appropriate. This is aligned to the RTP Customer Display Guidelines. • Message Acknowledgement (camt.035): <ul style="list-style-type: none"> ○ Corrected reject reason code when Routing and Transit number is not supported in RTP (reason code 'RC03' for Debtor/Assignee and 'RC04' for Creditor/Assigner) • Reason Codes: <ul style="list-style-type: none"> ○ Updated section 18.1.2 to include Reason Code '9954' for a Zelle RFP that does not include Instruction For Creditor Agent code 'RECI'. • General Changes: <ul style="list-style-type: none"> ○ Add format rules for all occurrences of LEI: Must be 20 characters, first 18 may be alphanumeric, last two must be numeric, in accordance with ISO specifications. Reject with admi.002 (650) for failing format validation. ○ Removed Section 3 on Message Usage Requirements, as this document is now a stand-alone document that is part of the RTP Technical Specifications. Reference the RTP Message Persona Specification document.
2.9	February 2020	<ul style="list-style-type: none"> • Inclusion of regular expression (RegEx) in the Detailed Message Description and new chapter 2.6 Regular Expression (RegEx) description • Updates to Section 1.2 to add compliance statement
2.9	July 2020	<ul style="list-style-type: none"> • Pacs.008 <ul style="list-style-type: none"> ○ Instruction Information field: updated from 140 character length to

		<p>35</p> <ul style="list-style-type: none"> ○ Updated Intermediary description index 2.15: “Payment sent that uses one of either “Ultimate Debtor” or “Ultimate Creditor” fields. If this code is used, one of “Ultimate Debtor” or “Ultimate Creditor” must be present in the message.” ○ Electronic Address Field updated from Conditional to Optional in Detail Message field Description section ● Pain.013 <ul style="list-style-type: none"> ○ Clarified product usage description for Local Instrument ○ Updated Payment Conditions flags from upper case True/False to only use lower case true/false flags ○ Updated Notes description for Early Payment Allowed ○ Updated Notes description for Guaranteed Payment ● General Updates <ul style="list-style-type: none"> ○ Added Section 18.7 Participant Duplicate Checking Requirements ○ Modified 2.5 Date/Time Format section to include that it uses ISO 8601 Standard format(24 hour clock) ○ Removed milliseconds from all admn messages in creation date time fields
2.10	February 2021	<ul style="list-style-type: none"> ● Update according TCH feedback (August 2020) ● Correction definition under (Ultimate) Debtor / (Ultimate) Creditor Identification ● New chapter in Appendix related to the duplicate check
		<ul style="list-style-type: none"> ● New Chapter 3 on Identification Usages and Definition ● Deleted chapter 1.2 on Changes and Compliance Update
